

Optimizing Your WiFi with Customized Login Page

Muhamad Mumtaz
HIGO Fitur Indonesia, PT

HIGO Fitur Indonesia, PT

- Founded in 2015
- As a company that runs on a mission to provide free or affordable access to everyone, we have a couple of solutions that we wish could reduce the bandwidth prices in Indonesia.
- We believe that information and it's media should be free for all corners of the world.
- We have two kind of product, HIGO (a Magazine aggregator mobile app) and HIGOSpot (social WiFi platform) we are constantly curating and generating data as a solution for publishers and local businesses.

About Me

- Born in 1996
- An electrical engineering graduate
- New in exploring the world of networking

MikroTik Hotspot

Please log on to use the internet hotspot service

login

password

HOTSPOT GATEWAY
powered by *MikroTik*

Powered by MikroTik RouterOS

Captive portal is a very undermined feature, it's simple, but you can utilized this page more.

MikroTik Hotspot

People who runs venues and cafes can use social media login, where data and other useful information could be drawn and managed. Advertisers may exploit an unclosable ads page, in addition to redirecting to your web page.

MikroTik Hotspot

Cheeky folks might just put a mini game in there.

With a little tweak and customization (and imagination), these options offered plentiful way to optimize your WiFi.

What Router to Use?

What Alternative?

- Social Media Login
- Advertising Space
- Mini Games
- Etc

Who Use These Alternatives?

- Social Media Login (you can get the social media data of customers for the purpose of e-mail blasting/ SMS blasting promos)
- Advertising Space (for advertising)
- Mini Games (for fun)

Social Media Login

If you own a restaurant or café, you may want to send a promo or discount to your beloved customers. You may also want to share very specific promos (e.g. for girls only, for kids). To do that, you need their contact, such as email, phone number, or social media. This will be discussed later.

Café

Ads Space

If you run a public area and put a free WiFi there, you may need some additional funding so your WiFi is maintained well. You could attain that by doing advertisement in your WiFi. Advertisers can give you funding if your demographic (people who went to your place) fits their intended viewers.

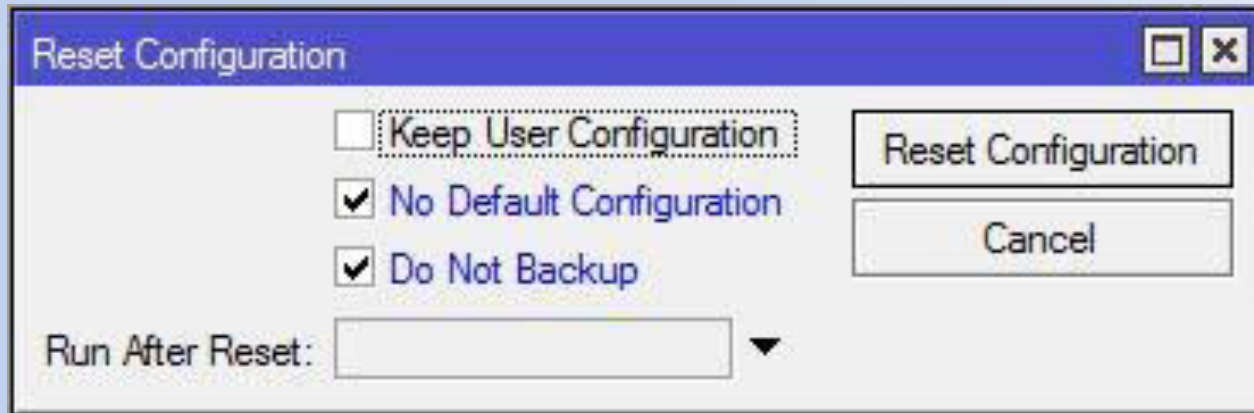

Public Area

How?

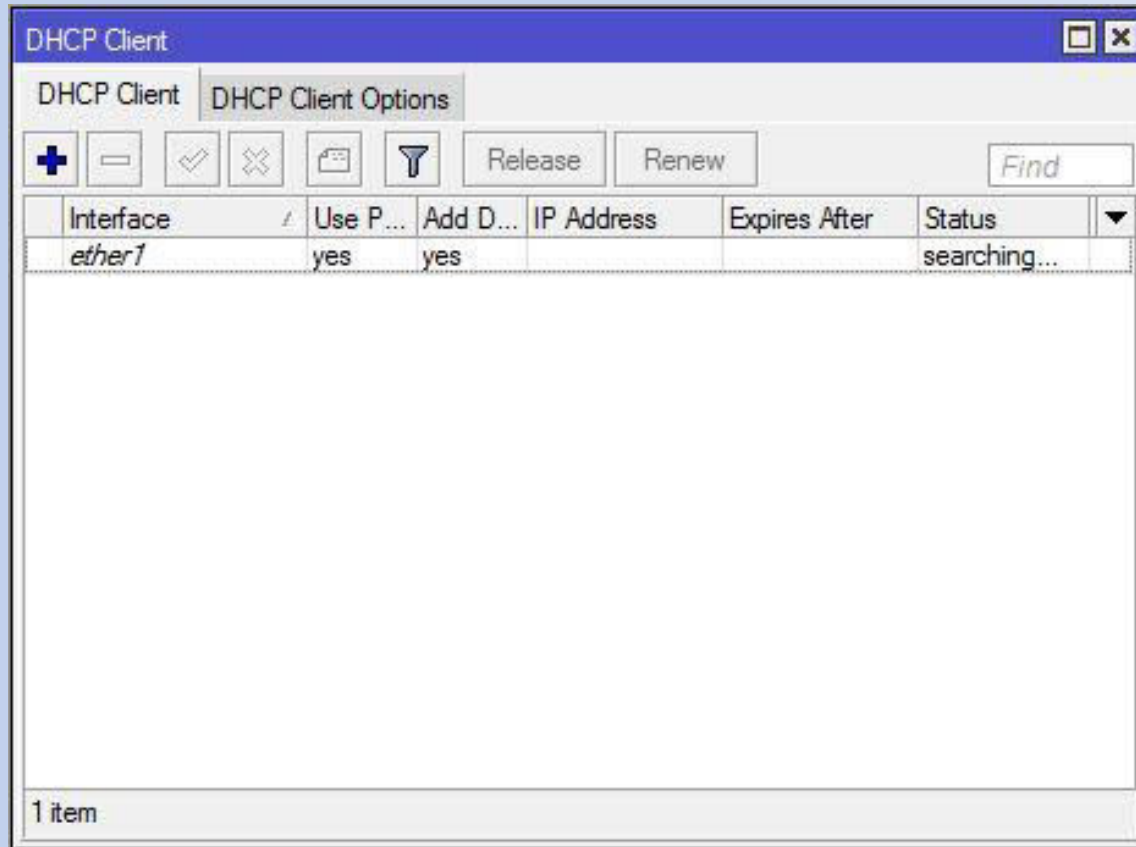

Here's the step you need to do before going further, you only need to do a simple MikroTik Hotspot setting. Make port ether1 plugged to your ONU/modem (as the internet source).

Setting

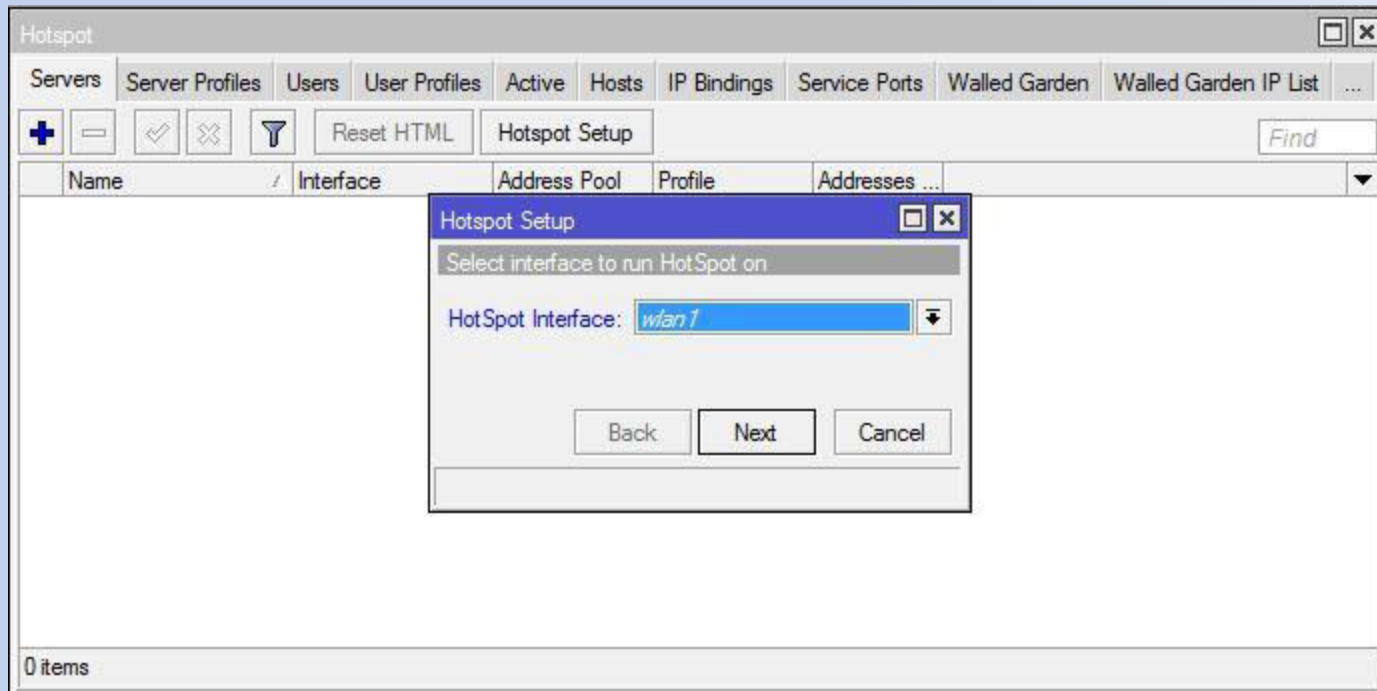

Reset the Mikrotik without the default configuration.

Setting (1)

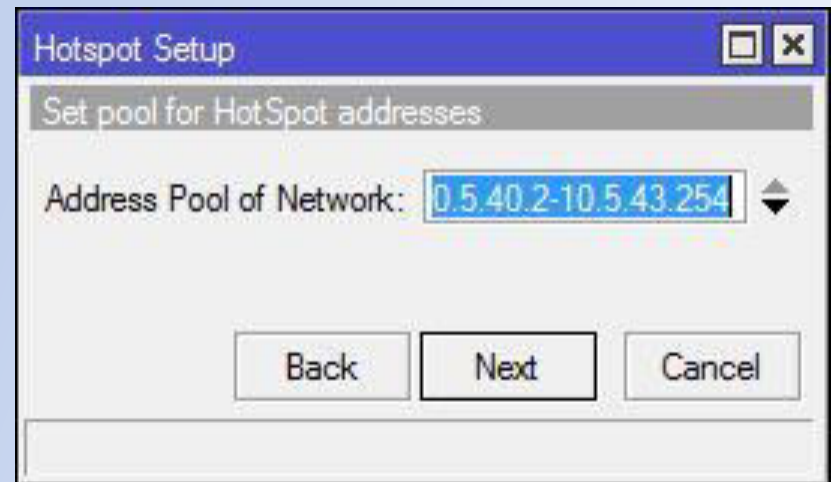

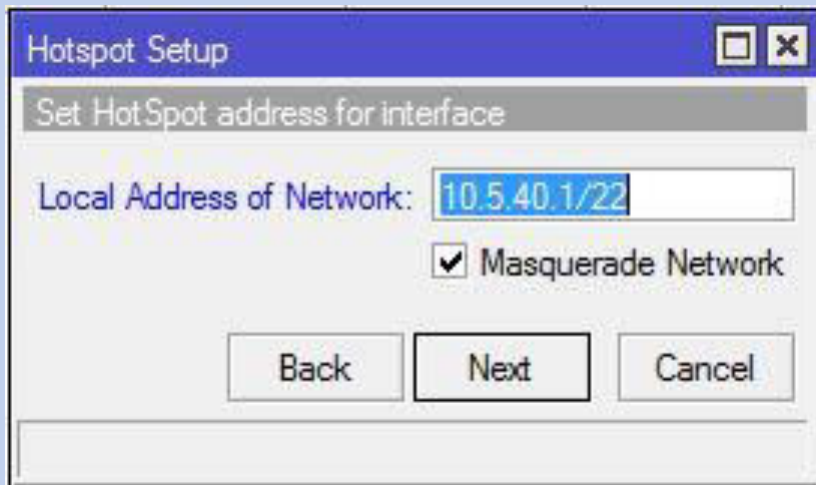

Set the DHCP Client in ether1 (or as you preferred) if the internet source IP is not static.

Setting (2)

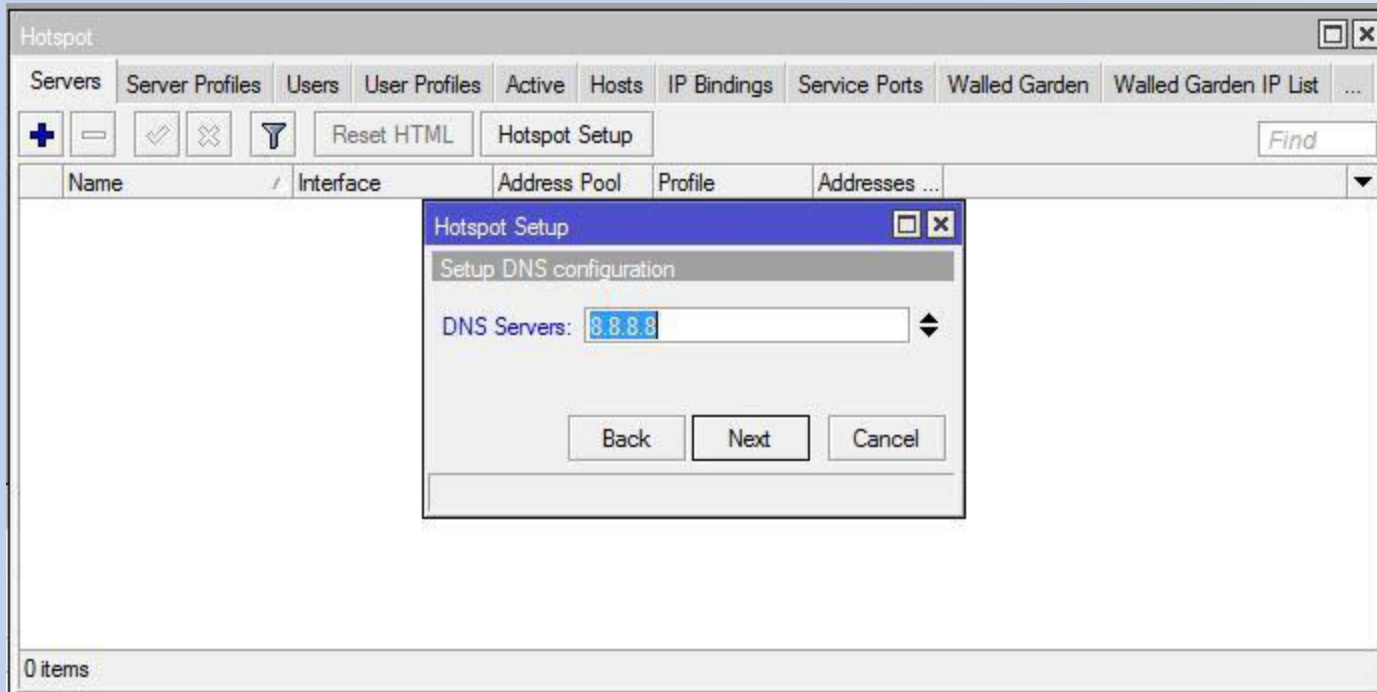

Setup the hotspot, the interface would be wlan1

Setting (3)

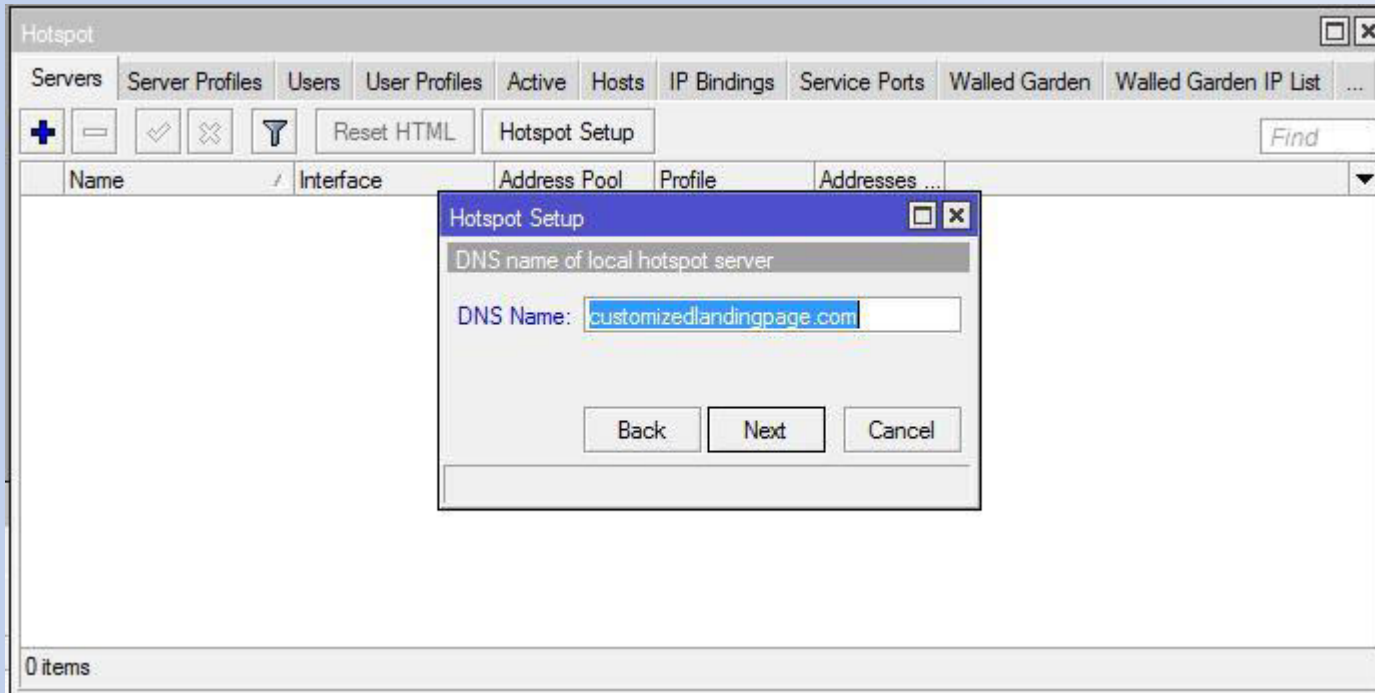

The local address should be adjusted to the number of people you expected would be connected to the wifi.

Setting (4)

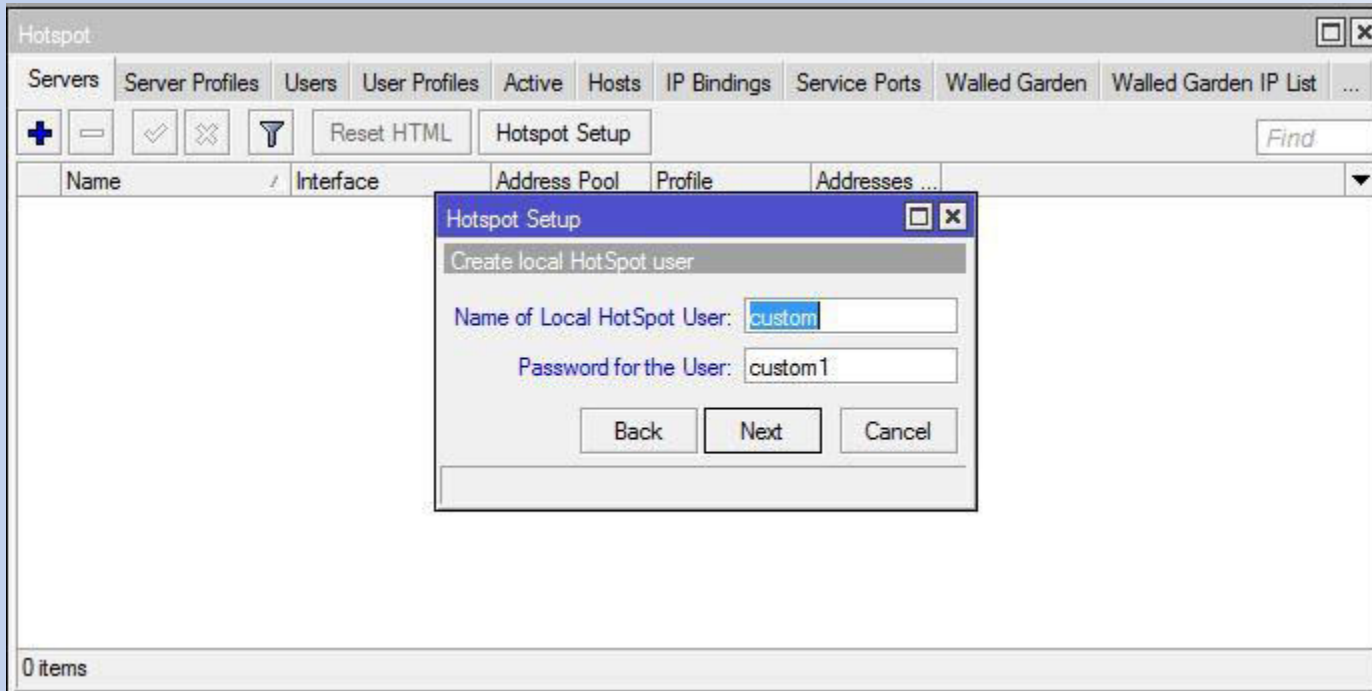

Use google DNS Server (8.8.8.8)

Setting (5)

Put in your DNS Name

Setting (6)

Last step of the Hotspot setup

Setting (7)

NAT Rule <10.5.40.0/22>

In the NAT Rule, set the Out. Interface port to ether1

Setting (8)

The screenshot shows the 'Hotspot Server Profile' configuration window, specifically the 'RADIUS' tab. The window title is 'Hotspot Server Profile <hsprof2>'. The 'RADIUS' tab is selected, and the 'Login By:' section is configured as follows:

- MAC (highlighted with a dotted border)
- Cookie
- HTTP CHAP
- HTTPS
- HTTP PAP
- Trial
- MAC Cookie

Other settings in the 'RADIUS' tab include:

- MAC Auth. Mode:
- MAC Auth. Password:
- HTTP Cookie Lifetime:
- SSL Certificate:
- Split User Domain
- Trial Uptime Limit:
- Trial Uptime Reset:
- Trial User Profile:

On the right side of the window, there are buttons for 'OK', 'Cancel', 'Apply', 'Copy', and 'Remove'. At the bottom left of the window, the text 'default' is visible.

We set the hotspot server profile, simply disable the MAC Cookie.

Setting (9)

The edited login.html

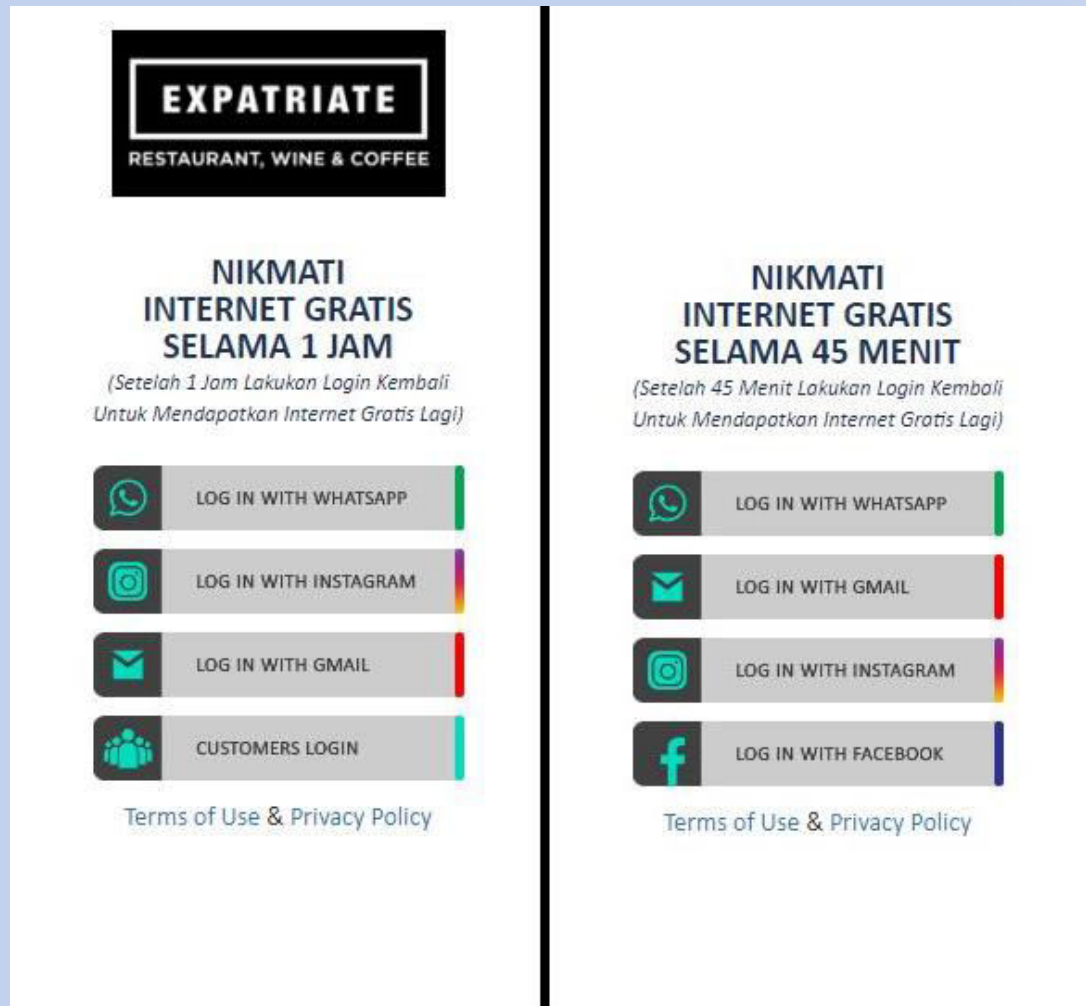

social media icons

Files

In the login.html, you need to do the following things:

- Figure out which code constitute which design.
- Coded in the login logo for social media, and also how to redirect them to the respective social media login page.

Social Media Login

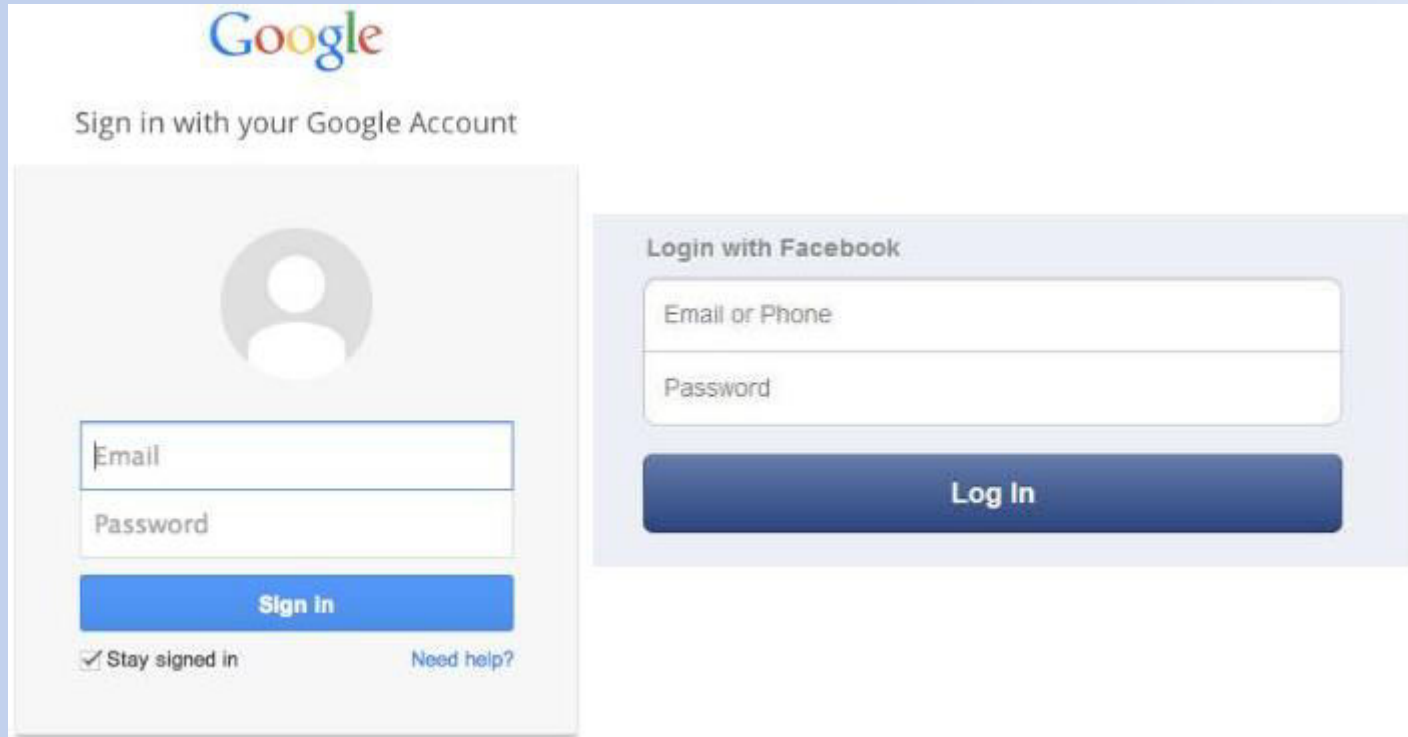

Here is the view of a Social Media Login, there's several option of social media, in which the user of the WiFi need to input in order to be able to browse the internet.

Social Media Login

You can put in several choices for WiFi user to pick in order to be able to access your WiFi. Instagram, Google, Facebook and Twitter are some of the social media who offer you an API, which when you use it, you can gather the data of the user logged in using that particular Social Media. (You can request the API and how to do it to them, here's the way used for Facebook: <https://developers.facebook.com/docs/facebook-login/>).

Social Media Login

The image shows two login forms side-by-side. The left form is for Google, featuring the Google logo at the top, the text 'Sign in with your Google Account', a grey profile icon, and input fields for 'Email' and 'Password'. Below these is a blue 'Sign in' button, a checked 'Stay signed in' checkbox, and a 'Need help?' link. The right form is for Facebook, titled 'Login with Facebook', with input fields for 'Email or Phone' and 'Password', and a dark blue 'Log In' button.

After signing their social media, the customer's profile will be extracted to the server you use to put the API, refer on this link for Facebook: <https://developers.facebook.com/docs/facebook-login/>.

Social Media Login

The data you gather usually includes e-mail address and social media info. You can also customized it accordingly ton your needs, such as only using phone number or full biodata in order to use the WiFi. (the drawback is you can't verify the biodata). You can used all these data with e-mail/SMS blasting your restaurant/café's promo.

Walled Garden

```
/ip hotspot walled-garden  
add dst-host=:.^www.example.com path=":/test\$("
```

You need to put in walled garden, a setting that allowed authentication bypass, of the social media you use in the login page in order for the user to be redirected to the respective social media.

To put the ads, simply upload the image to the Files, the name of the image here is banner, and in the login.html set a countdown function so the viewers can't skip the banner before seeing it for several seconds.

Advertisement

```
<div id="banner-page" style="display: none;">  
  <div style="background: #CCC; color: #FFF; font-weight: bold; position: relative; height: 20px; width: 100%;">  
    <div id="banner-page-loading" style="background: #01DCBE; height: 20px; width: 0%;"></div>  
    <div style="position: absolute; top: 0; text-align: center; width: 100%;">MENGHUBUNGAN</div>  
    <div id="banner-page-countdown" style="position: absolute; top: 0; right: 5px;">15</div>  
  </div>  
  <div id="image-banner">  
      
  </div>
```

You need to code in the banner in the login.html file, do some more CSS work so the countdown is displayed well.

You can put several image in the Ads Space, you can also combined Social Media Login with Ads Space.

Games

With the ability to customized the login.html, you can go much further and put in a game (a bit tricky in the coding part), here's an example of a lottery game. The game includes promo from advertisers, your WiFi users will be interested in playing it because of the possibility of winning a promo.

Games

PILIH HADIAH DI ATAS
dan menangkan voucher MOL
sebesar **Rp 20.000!**

PILIH HADIAH DI ATAS
dan menangkan voucher MOL
sebesar **Rp 20.000!**

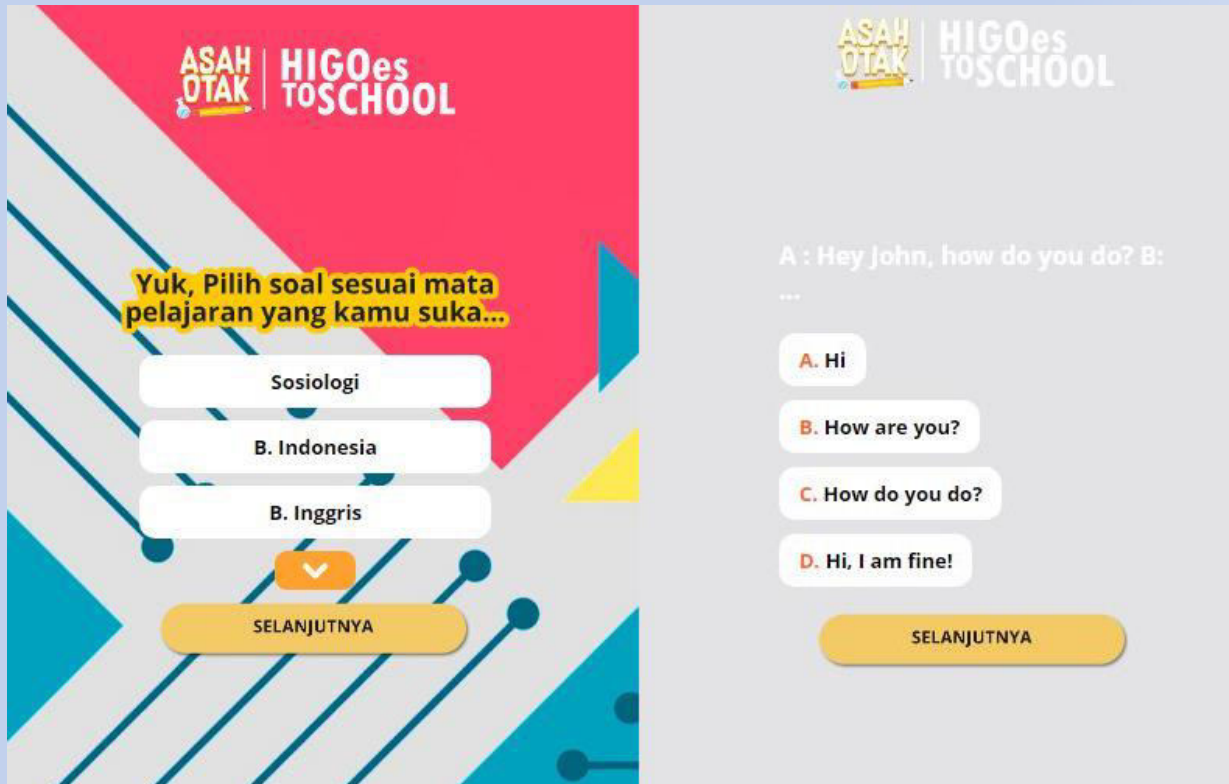

There's three option of boxes, the game is simple, you need to pick one of the box to win a voucher.

Games

The image displays two promotional banners for HIGO games, separated by a vertical line. Both banners feature the HIGO logo, the 'coffee toffee' logo, and the 'zGold MDLPOINTS' logo at the top. The left banner shows a gift box with a teal ribbon and a 'Rp 20.000' label, with the text 'CONGRATULATION!' and 'Isi data diri dibawah ini*' above it. Below this are input fields for 'Phone' and 'Email', a note '*Data valid untuk pengiriman kode voucher', and a 'LOGIN' button. The right banner shows a gift box with a teal ribbon and the text 'COBA LAGI NANTI!' above it, with a 'LOGIN' button below.

If your customer lose, they can come again the next day, if they win, they need to put in their data, essentially registering themselves.

Games

Alternatively, you could put an easy multi-choice quiz.

You may even combined all three customization to maximize your WiFi, redirect to the Social Media Login (containing Ads) after the user finished playing the game.

Conclusion

There is many possibility to fully utilized your WiFi, If you are a café manager, you may not want to give your expensive fast connection freely, you may want to exchanged it with the customer's data. And if you installed free WiFi in a public area, maybe there's some advertisers who want to help funding you (by putting their ads in the WiFi).
