

MIKROTIK USER MEETING ONLINE INDONESIA 2020

## Network Automation Mikrotik For Managing Wireless Access Point in Computer Laboratory Using Python

Very Setiawan - SMKN 1 Nglegok

# INTRODUCTION

# Very Setiawan

- Guru TKJ SMKN 1 Nglegok
- Mengenal mikrotik dari 2007 (Freelance IT Support)
- Academy Trainer Mikrotik SMKN 1 Nglegok (ACTR0592) - 2016
- MTCNA, MTCRE, MTCIPV6E
- <https://www.linkedin.com/in/very-setiawan-6572ab1a2/>
- Linux User

# Training Mikrotik Guru TKJ oleh ID Networkers

## SMK NEGERI 1 NGLEGOK

- SMK Negeri Termuda di Kabupaten Blitar
- Mikrotik Academy 2016
- Juara 2 Olimpiade Mikrotik APJII 2017
- Juara 1 Olimpiade Mikrotik APJII 2018
- Juara 3 Lomba Ketangkasan Jaringan Dirhubad Cup 2019

# Komunitas IT SMKN 1 Nglegok

Bootcamp SMK TKJ Blitar Raya oleh KITS

Routing on The Road oleh Citraweb/Mikrotik.id

# Apa Yang Kita BAHAS???

- Yang dilakukan dalam manajemen wireless Access Point di lab
- Alasan Menggunakan Mikrotik?
- Kenapa perlu Network Automation?
- DEMO!!!

Yang dilakukan dalam  
manajemen wireless  
Access Point di lab

# Manajemen Basic Configuration

# Manajemen Jaringan

# Manajemen Bandwidth

# Manajemen Wireless

# Why Must Use MikroTik??

# Indonesia Banget

Fitur Lengkap dalam 1  
perangkat

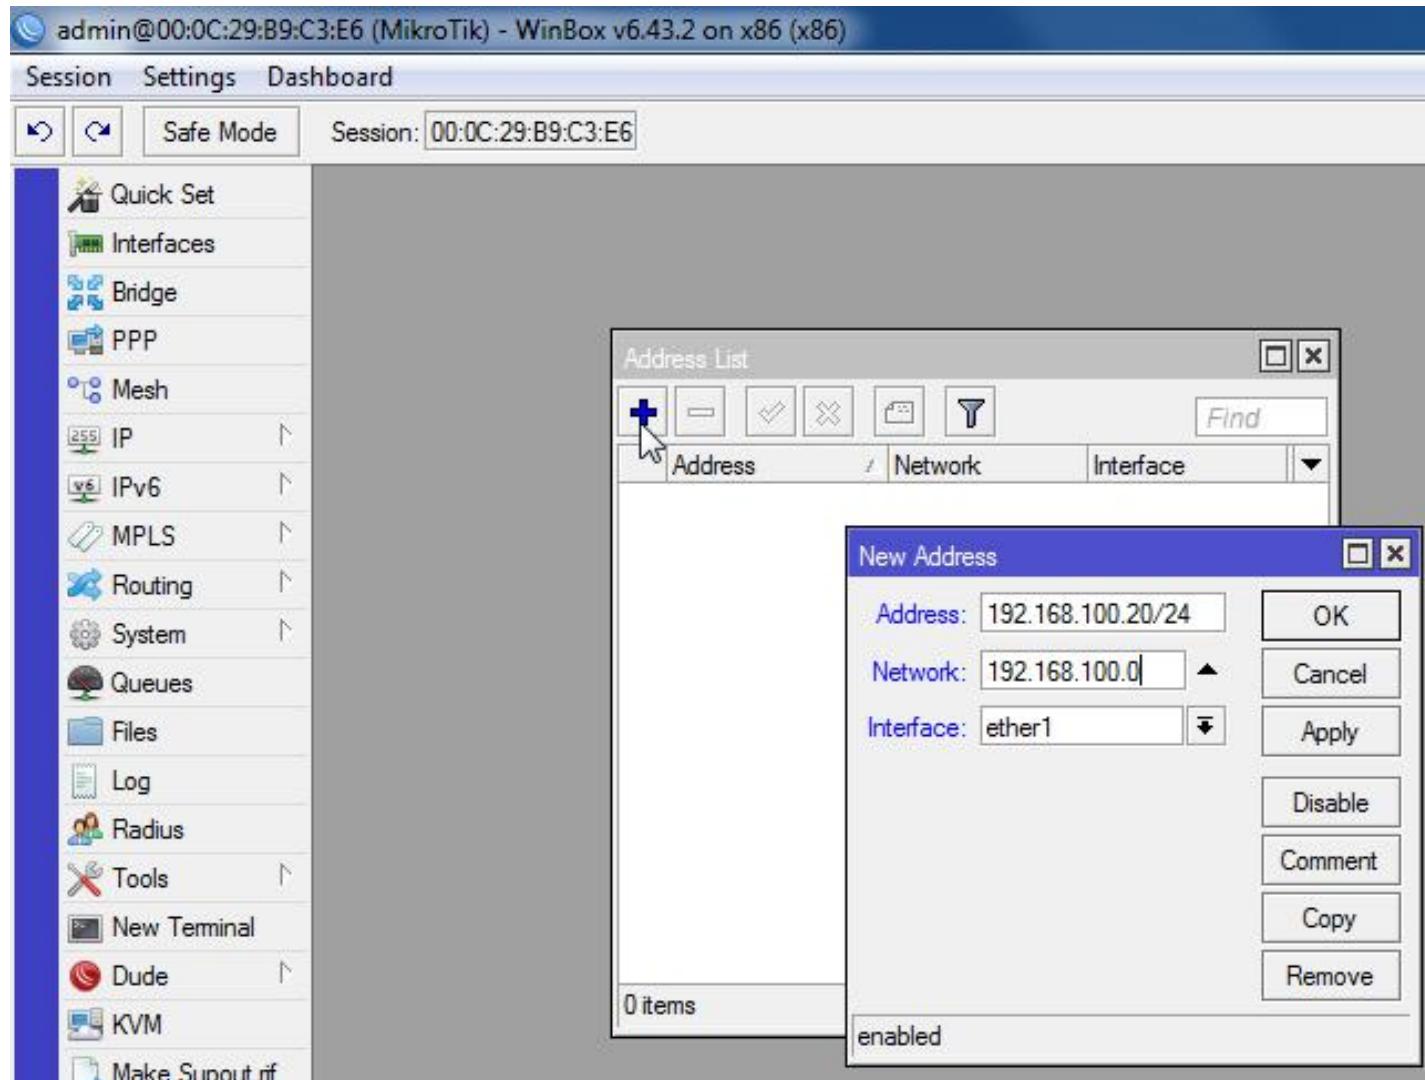

Sesuai dengan  
kurikulum TKJ

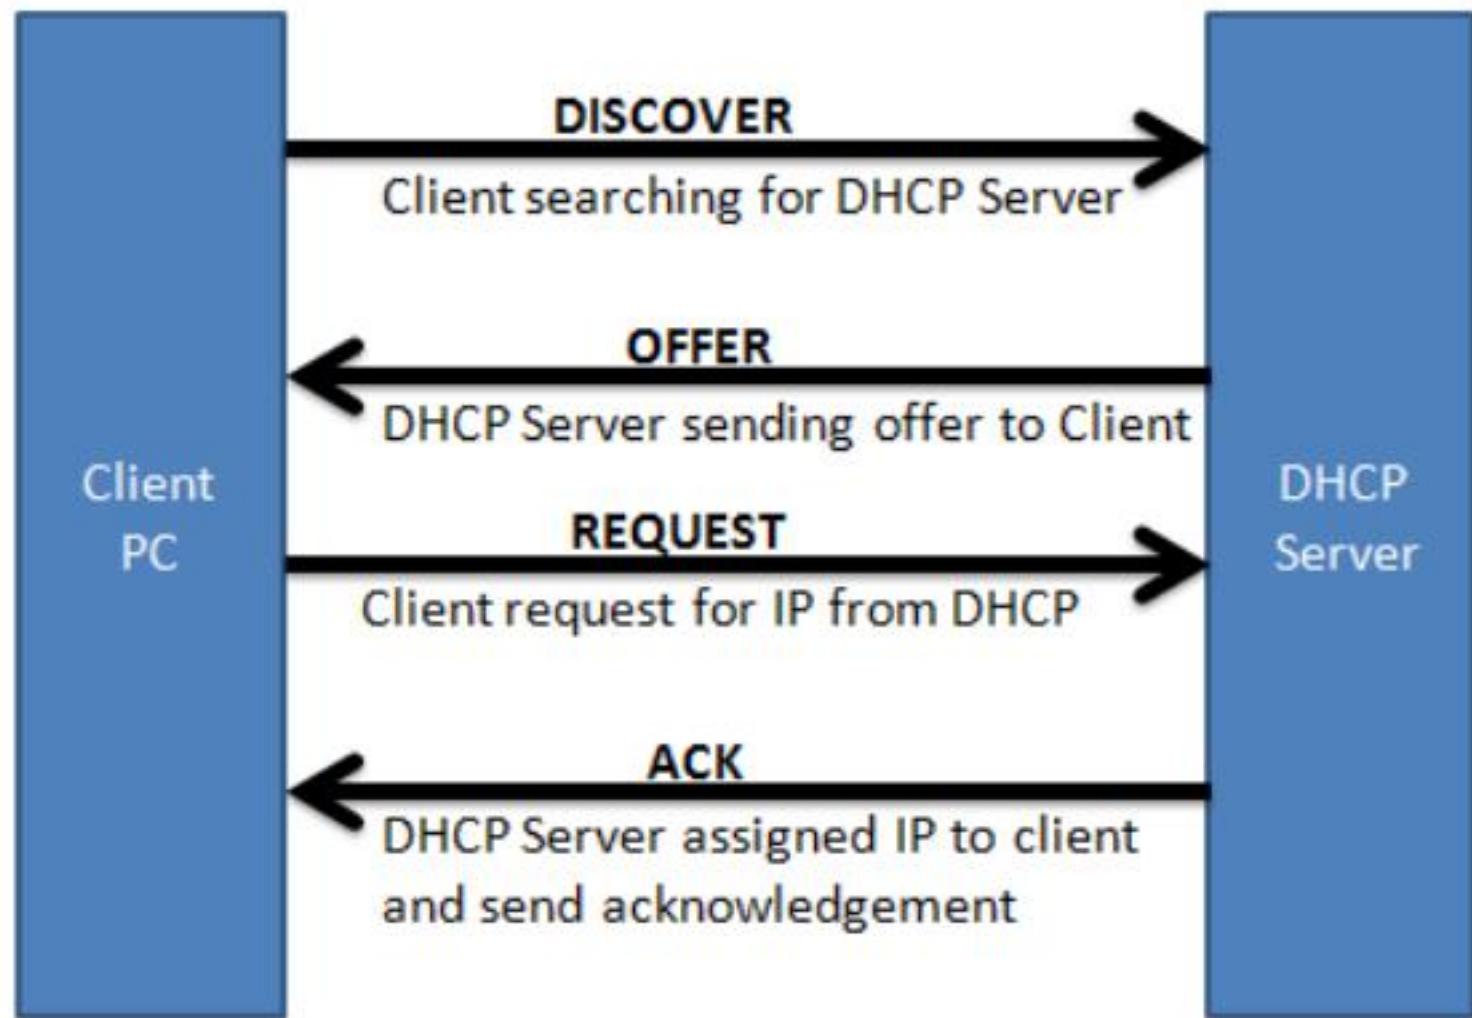

Manajemen  
Jaringan

# Manajemen Jaringan

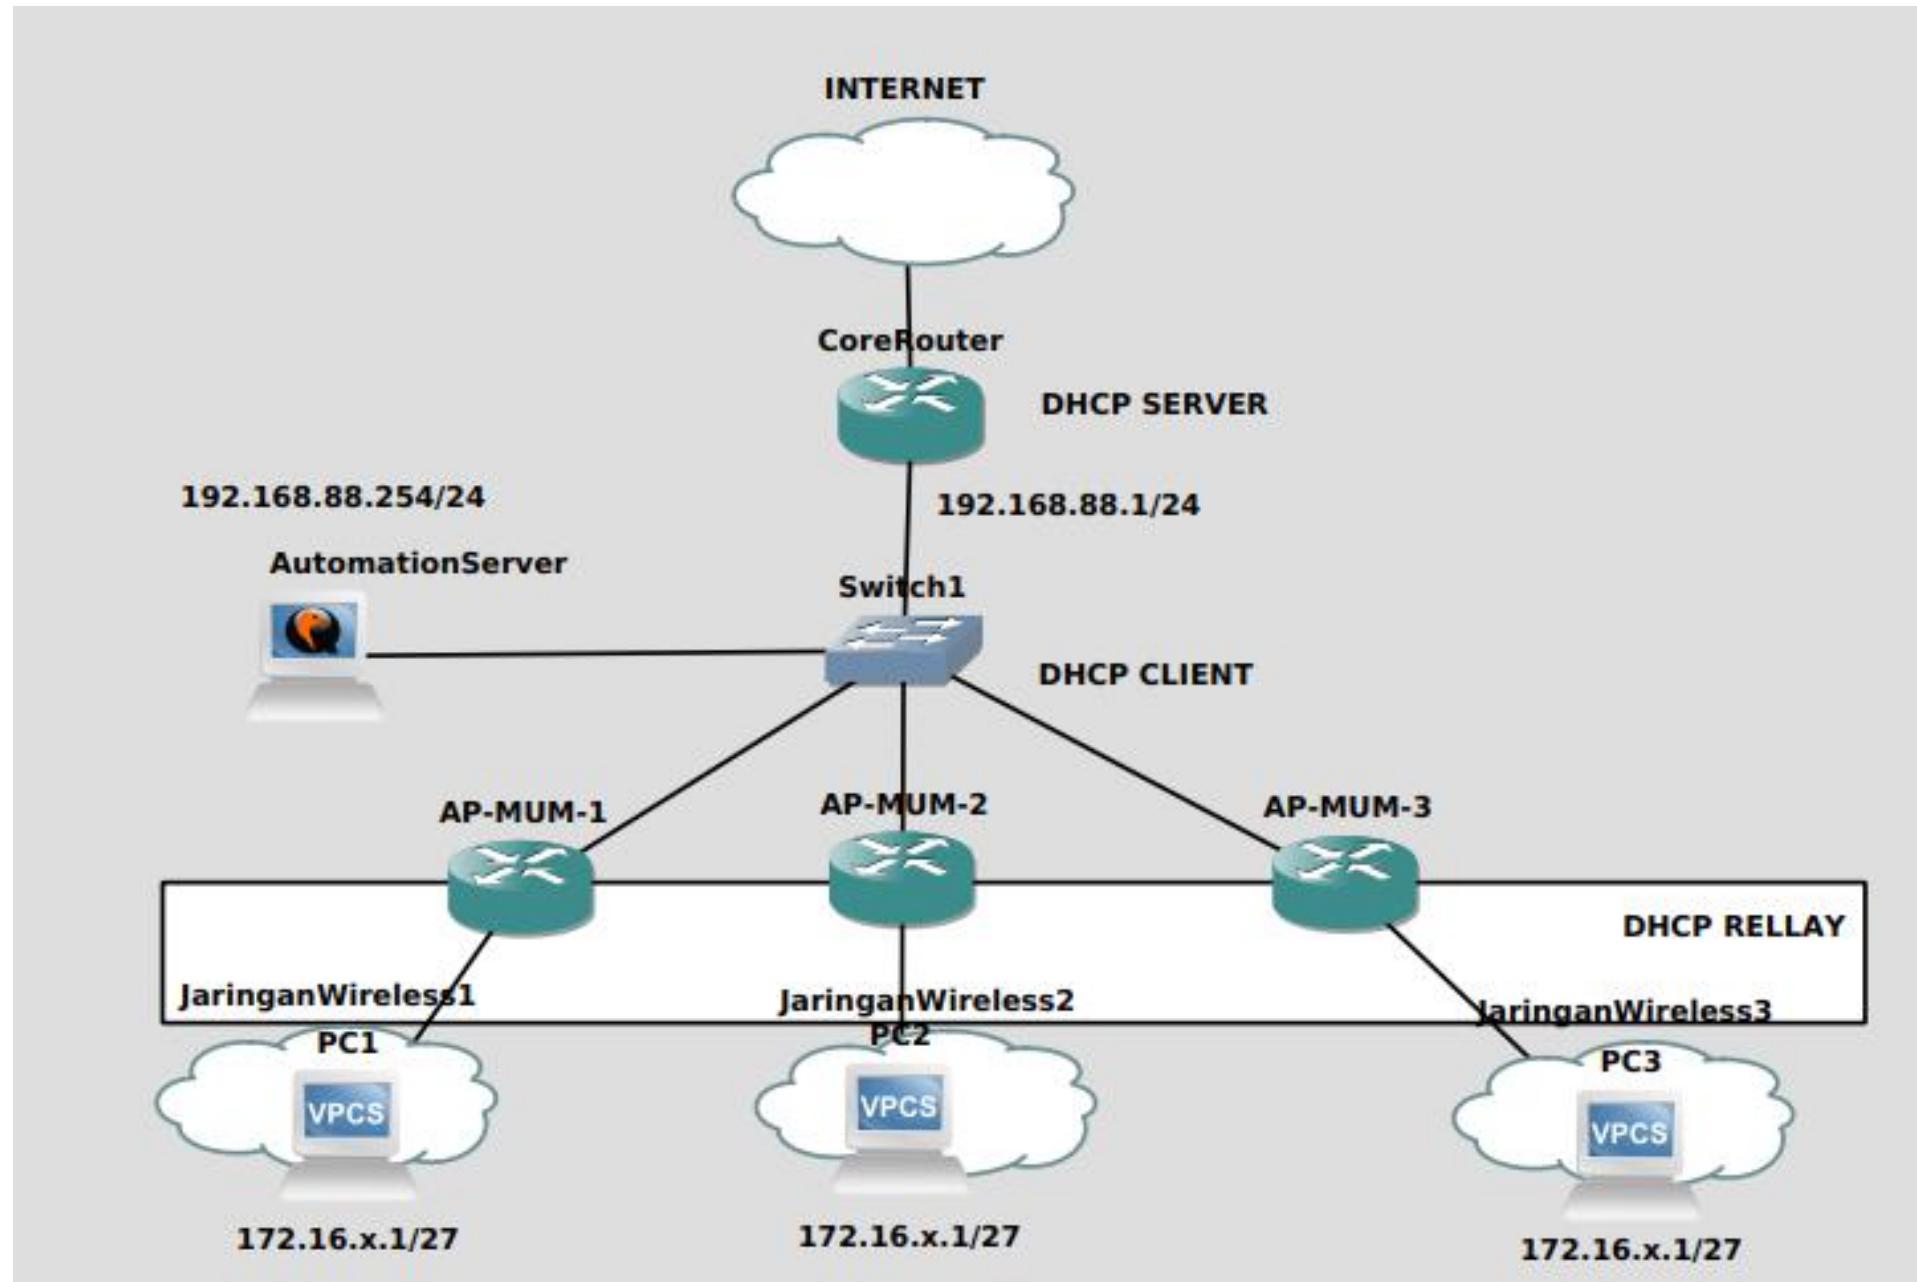

# DHCP (Dynamic Host Configuration Protocol)

# DHCP Client

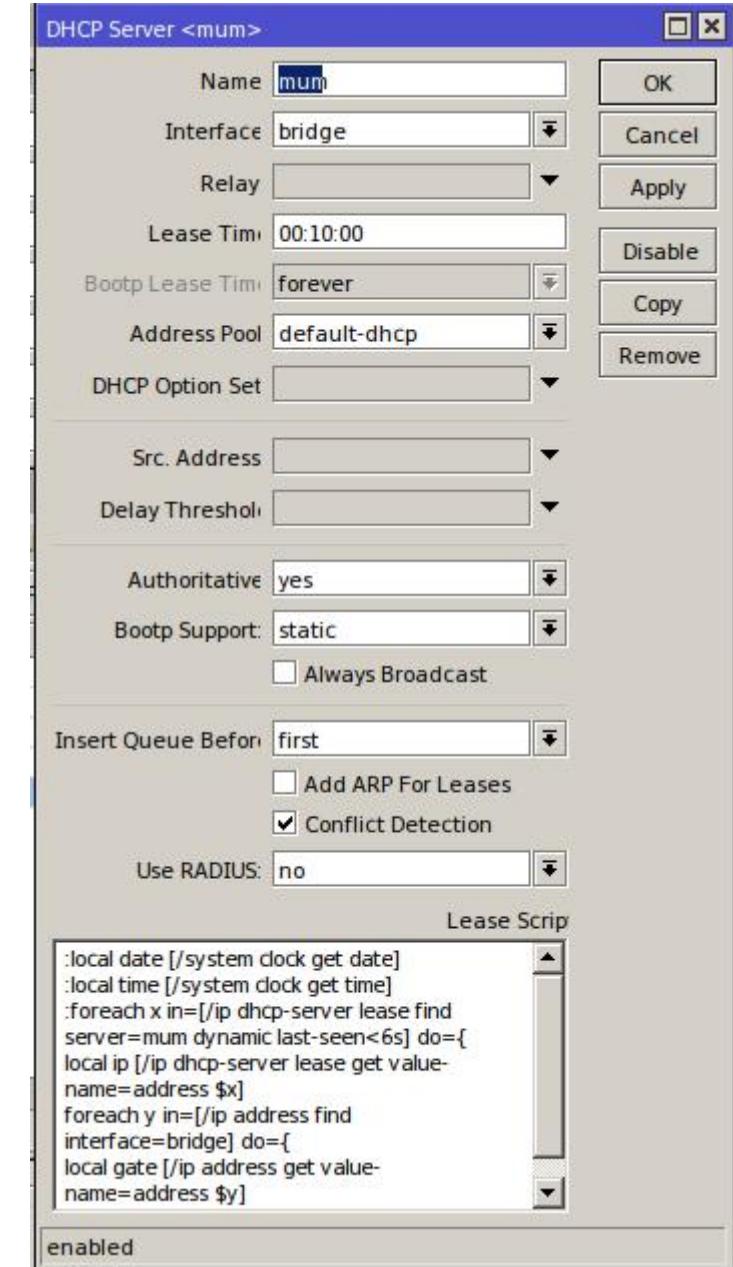

# DHCP Relay

# DHCP Server

# ✓ DHCP Server Lease Script

```
:local date [/system clock get date]
:local time [/system clock get time]
:foreach x in=[/ip dhcp-server lease find server=mum dynamic last-seen<6s]
do={
local ip [/ip dhcp-server lease get value-name=address $x]
foreach y in=[/ip address find interface=bridge] do={
local gate [/ip address get value-name=address $y]
/ip dhcp-server lease make-static $x
/ip dhcp-server lease comment comment="ip diterima pada : $time-$date" $x
/tool fetch url="http://192.168.88.254:5010/conf" http-method=post http-
content-type="application/json" \
http-data="{"ip_router":"$ip","ip_gateway":"$gate}"
}
}
```

# Manajemen Bandwidth

## Properties

Property	Description
<code>address</code> (string; Default: )	IP address of the device to copy file from.
<code>as-value</code> (set   not-set; Default: not-set)	Store the output in a variable, should be used with the <code>output</code> property.
<code>ascii</code> (yes   no; Default: no)	
<code>check-certificate</code> (yes   no; Default: no)	Enables trust chain validation from local certificate store.
<code>dst-path</code> (string; Default: )	Destination filename and path
<code>host</code> (string; Default: )	Domain name or virtual domain name (if used on web-site, from which you want to copy information). For example,  <div style="border: 1px solid #ccc; padding: 10px; width: fit-content; margin: auto;"><code>address=wiki.mikrotik.com host=forum.mikrotik.com</code></div> In this example the resolved ip address is the same (66.228.113.27), but hosts are different.
<code>http-method</code> ( delete get post put; Default: get)	the HTTP method to use
<code>http-data</code> (string; Default: )	the data, that is going to be send, when using PUT or POST methods
<code>http-header-field</code> (string; Default: *empty*)	list of all header fields and their values, in the form of <code>http-header-field=h1:fff,h2:yyy</code>
<code>http-content-type</code> (string; Default: application/x-www-form-urlencoded)	the MIME type ↗ of the data you are going to send via POST/GET. Removed since v6.44, now <code>http-header-field="content-type: xxx"</code> should be used.
<code>keep-result</code> (yes   no; Default: yes)	If yes, creates an input file.
<code>mode</code> (ftp http tftp {}  https; Default: http)	Choose the protocol of connection - http, https , ftp or tftp.

# Network Automation??

# Kelebihan

- memudahkan pekerjaan utamanya guru tk j
- sekali config l - banyak device terlampaui
- komputer tidak mengeluh (sing sambat uwonge)
- implementasi kurikulum program ke networking

# Using python For Automation

- mudah dipelajari daripada pemrograman yang lain
- support automation dengan paramiko for ssh
- support flask for microweb
- bisa digunakan sebagai materi pemrograman dasar di TKJ

image source : <https://datawider.com/>

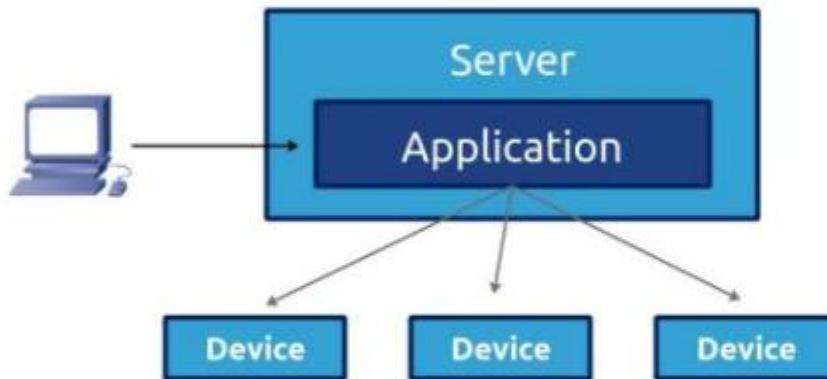

# Paramiko for SSH

```
ssh_client = paramiko.SSHClient()  
ssh_client.set_missing_host_key_policy(paramiko.AutoAddPolicy())  
ssh_client.connect(hostname=ip_mik,username=username,password=password,  
allow_agent=False, look_for_keys=False)  
print (f"sukses login to {ip_mik}")
```

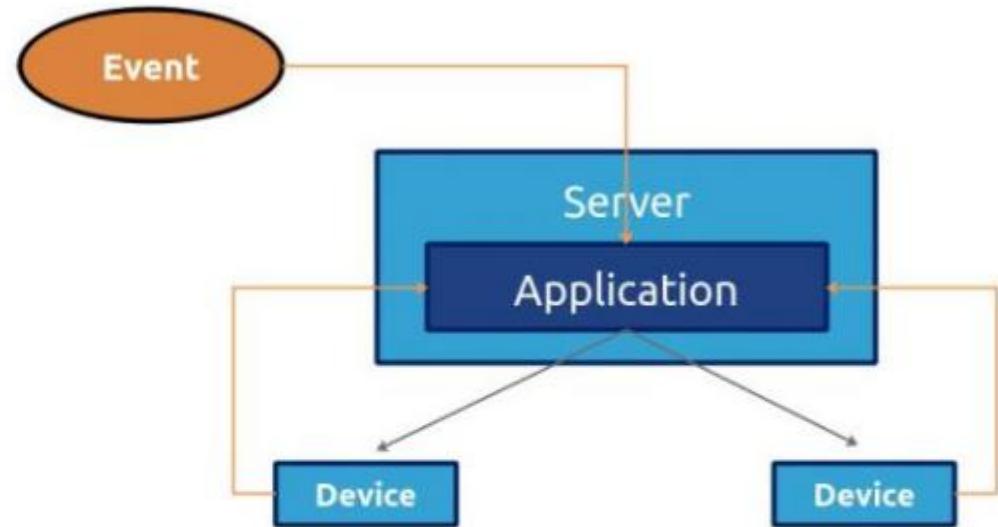

# DEMO TIME!!!

## Proactive

- Manual Change
- Change by human

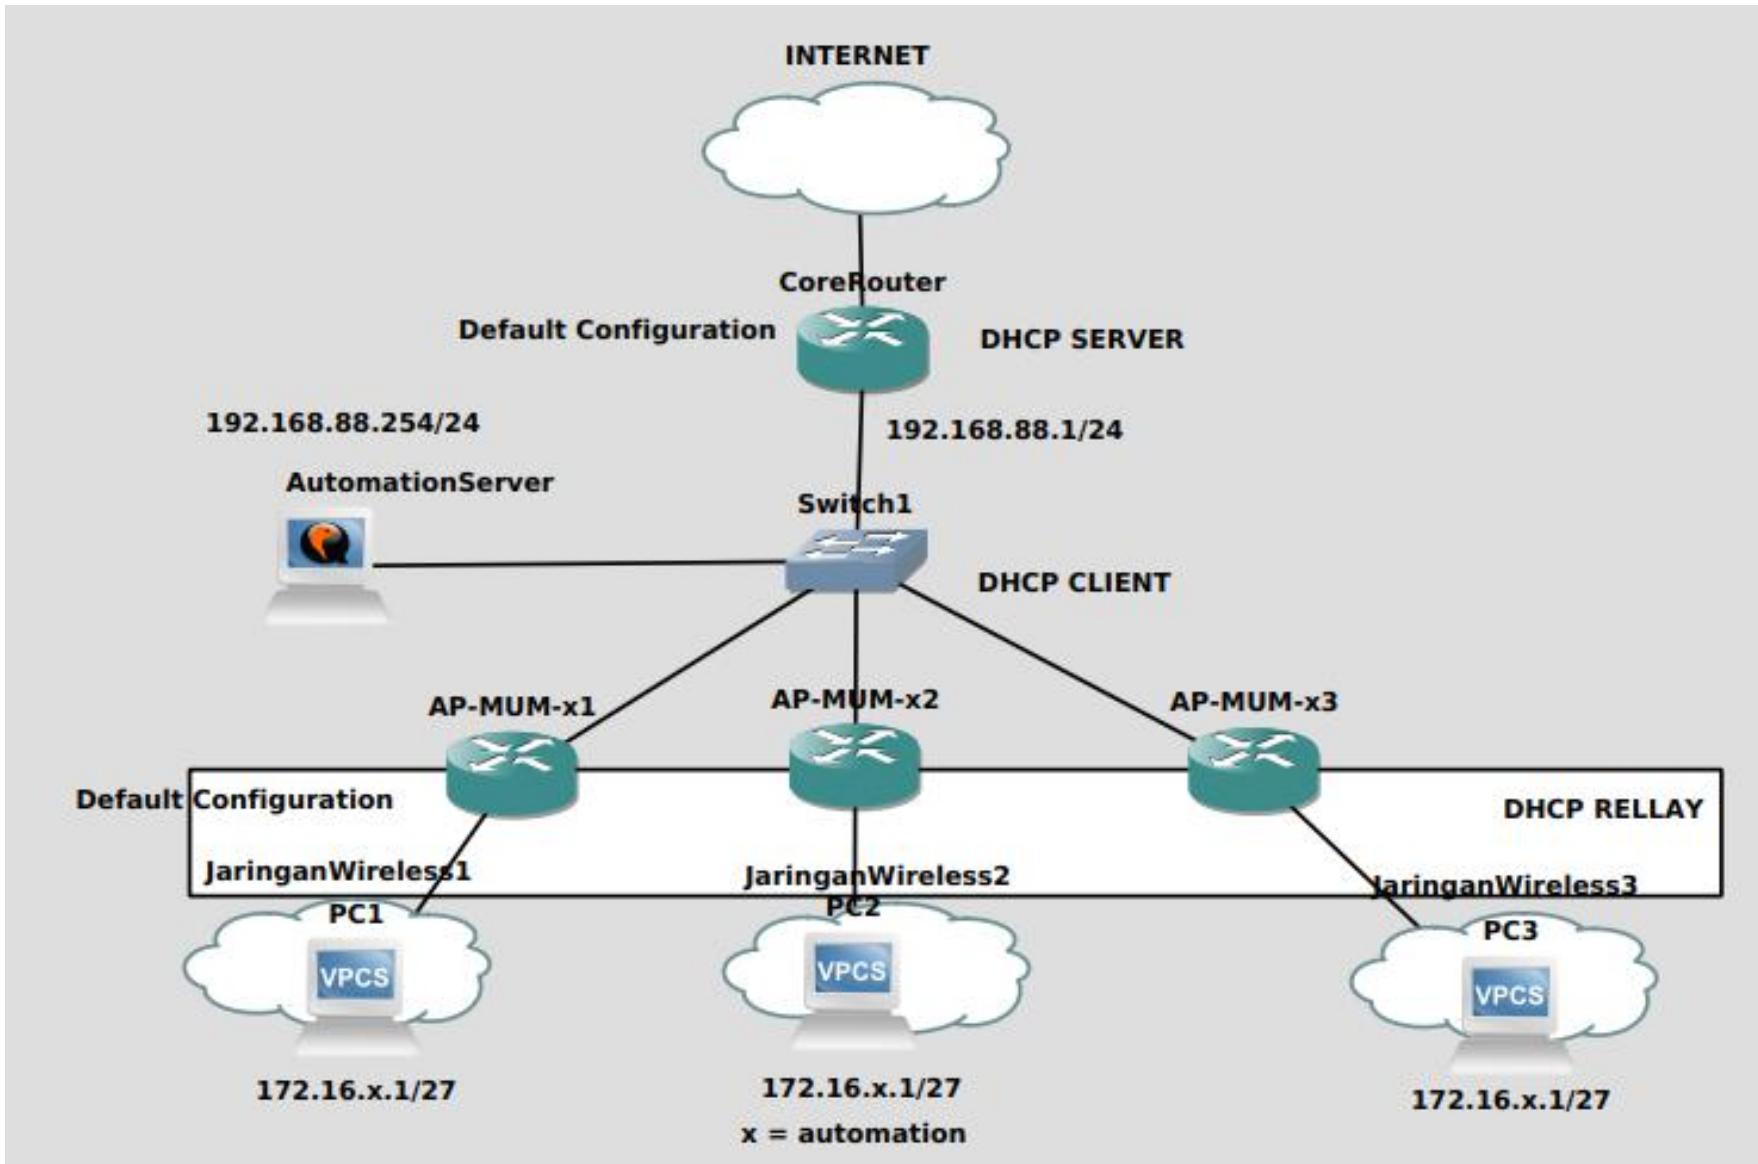

## Reactive

- Change by event
- Device send information to server
