BCP For Layer 2 Network

What is **BCP**?

BCP is a method that makes it possible to bridge Ethernet packets via PPP links. The established BCP is an independent part of the PPP tunnel, it is not related to the IP address of the PPP interface, bridging and routing can occur at the same time independently. BCP can be used as a substitute for EoIP + former VPN Tunnel or WDS link via wireless network.

RouterOS supports BCP (Bridge Control Protocol) for PPP, PPTP, L2TP and PPPoE interfaces.

BCP Topology

L2 because we want DHCP, Romon and other Layer services like VOIP Discovery over the WAN

L2 VS L3 VPN

| Site-to-site Layer 2 VPN | Site-to-site Layer 3 VPN |
|--|--|
| All sites share same LAN IP subnet | Each site has different LAN IP subnet |
| Broadcast domain is end-to-end everywhere | Broadcast is not possible between sites |
| Centralized DHCP Server | Independent DHCP Server in each site |
| Centralized Internet Gateway | Possible individual Internet Gateway in each site |
| Based on bridging No routing required | Static Route or Dynamic Routing Protocol required |
| | |

• Site = Location = Office

* Reference: Lay Minh (Makito) April 24th, 2017 MikroTik User Meeting, Phnom Penh, Cambodia

L2VPN Methods in RouterOS

- EoIP + Bridging
 - IPSec encryption but no authentication mechanism
 - Additional packet overhead, additional configuration steps
 - Easy to configure, harder to maintain.
 - Must create one static tunnel for every client.
 - Requires Public IP is every location
- Point to Point Protocol (PPP) + Bridge Control Protocol (BCP)
 - Only Hub router needs Public IP
 - Hub router configuration is one time work, for each new location, only Spoke router needs to be configured
 - Client-Server type VPN, requires more efforts on initial configuration

Bridging

- Bridging is simply the ability to join together different interfaces into one logical interface
- Bridges behave much like switches, and after 6.41 they offload to onboard switches
- Bridging over a Layer 3 network is useful for extending Layer 2 services from Point A to Point B when you do not control the network in between. (The Internet)

Bridge Control Protocol (BCP)

- Point to Point Protocol (PPP) + BCP
- Hub and spoke network is easily built
- Only a single directly connected border router is required (or dst-nat)
- Only requires 1 public Ip for the server side (not like EoIP)
- Clients can be static or dynamic IP's
- Tunnels can be created quickly by remote devices
- Single step configuration, not tunnel over a tunnel
- Provides authentication and encryption in a single step

I Don't see BCP

VPN Configuration PPP + BCP Method

- There are a few kinds of PPP Tunnels supported in RouterOS:
 - Point to Point Tunneling Protocol (PPTP)
 - Well-known
 - Layer 2 Tunneling Protocol (L2TP)
 - Can combine with IPsec for encryption
 - Secure Socket Tunneling Protocol (SSTP)
 - Very secure, can bypass most of the firewall, but slow
- BCP is Bridge Control Protocol, allows sending Ethernet Frame over PPP.
- Due to all PPP Tunnels' configurations are quite similar,
- We will show only L2TP example in this presentation.

VPN Configuration PPP + BCP Method

- HQ : 6 Steps to complete
 - 1. Create Bridge Interface
 - 2. Add LAN interface to the Bridge Port
 - 3. Create IP Pool for VPN point-to-point IPs
 - 4. Create PPP Profile by assigning the Bridge in the profile
 - 5. Create PPP Secret using PPP Profile you created in Step 4
 - 6. Enable L2TP VPN Server
- Branch : 4 Steps to complete
 - 1. Create Bridge Interface
 - 2. Add LAN interface to the Bridge Port
 - 3. Create PPP Profile by assigning the Bridge in the profile
 - 4. Create L2TP Client Interface

L2TP + BCP Topology

T

Configuration - PPP + BCP HQ (Step 1 & 2)

New Interface

General STP Status Traffic

Name: Bridge-BCP

Type: Bridge

MTU:

Actual MTU:

L2 MTU:

- 1. Create a VPN Bridge :
 - Bridge menu -> [+]
 - Interface Name: Bridge-BCP
 - Protocol Mode: rstp

- 2. Add LAN Interface (ether2) as Bridge Ports :
 - Bridge menu -> Ports -> [+]
 - Interface: ether2
 - Bridge: Bridge-BCP

| New | Bridge Port | | |
|-----|-------------|--------------|---------|
| Gen | eral Statu | 3 | ОК |
| | Interface: | Ether2-LAN Ŧ | Cancel |
| | Bridge: | Bridge-BCP ₹ | Apply |
| | Priority: | 80 hex | Disable |
| | Path Cost: | 10 | Comment |
| | | | |

Configuration - PPP + BCP HQ (Step 3)

- Create IP Pool for VPN point-to-point IP :
 - IP -> Pools -> [+]

- When Branches connected to VPN, they will get IP from this IP range, and these IPs can be used for monitoring
- The use of IP Pool is highly recommended if you have many branches, for example in the hub and spoke topology

Configuration - PPP + BCP HQ (Step 4)

- Create PPP Profile, enable BCP by assigning VPN Bridge in the PPP Profile:
 - PPP menu -> Profiles -> [+]
 - Local Address is HQ's VPN P2P IP
 - Remote Address is Branches' VPN
 P2P IP range
 - By assigning Bridge-BCP to Bridge, BCP will be enabled on this VPN Server, and all VPN Clients with BCP capability will be added automatically to the Bridge port when connected

| New PPP Profile | |
|--|---------|
| General Protocols Limits Queue Scripts | ОК |
| Name: BCP-Profile | Cancel |
| Local Address: 10.10.10.0 🔻 📥 | Apply |
| Remote Address: POOL-VPN 🔻 | Comment |
| Bridge: Bridge-BCP Ŧ | Сору |
| Bridge Port Priority: | Remove |
| Bridge Path Cost: | |

Configuration - PPP + BCP HQ (Step 5)

- Create PPP Secrets for Branches:
 - PPP menu -> Secrets ->[+]
 - Name is VPN Username
 - Password is VPN Password
 - Service can be L2TP or any
 - Assign the **PPP Profile** that you created in Step 4 as Profile
- Technically you can use:
 - same PPP Secret for all Branches
 - or different PPP Secret per Branch

| New PPP Secret | | |
|------------------|-------------|---------|
| Name: | faris | ОК |
| Password: | jawad 🔺 | Cancel |
| Service: | I2tp ∓ | Apply |
| Caller ID: | ▼ | Disable |
| Profile: | BCP-Profile | Comment |
| Local Address: | ▼ | Сору |
| Remote Address: | ▼ | Remove |
| Routes: | | |
| Limit Bytes In: | ▼ | |
| Limit Bytes Out: | | |
| Last Logged Out: | | |
| enabled | | |
| | | |

Configuration - PPP + BCP HQ (Step 6)

- Enable L2TP VPN Server
 - PPP menu -> L2TP Server button
 - Default Profile: BCP-Profile
 - Fill in IPsec Secret if you want to have encryption on the link

| L2TP Server | |
|-------------------------------------|--------|
| Enabled | ОК |
| Max MTU: 1450 | Cancel |
| Max MRU: 1450 | Apply |
| MRRU: | |
| Keepalive Timeout: 30 | |
| Default Profile: BCP-Profile F | |
| Max Sessions: | |
| Authentication: 🗹 mschap2 🔽 mschap1 | |
