

Welcome

Agenda

- Introduction of your presenters
- Case: WTC Amsterdam building network
- Why MikroTik?
- Migration path from Cisco to MikroTik
- Lessons learned

A black and white portrait of Alex van der Baan, a man with short dark hair, smiling. He is wearing a light-colored collared shirt and a patterned blazer. The portrait is partially obscured by a large white diagonal shape that also contains the text.

PROPER^{ICT}

Alex van der Baan

- Service and Project management Lead at NDI (2006-2015)
- MTCNA & MTCRE
- Working with the MikroTik platform since 2007
- Responsible for the redesign and rollout of the current MikroTik backbone
- Started Proper ICT beginning of 2016
- To assist owners of commercial real estate with the challenges of integrated networking
- To educate and assist managed service providers to move core network and CPE management to MikroTik
- MikroTik distributor since May 2016

Glen Christensen

- Network Lead at NDI
- Working with the MikroTik platform since 2015...love at first sight
- Attended MUM Europe 2016 in Ljubljana
- NDI provides a broad range of ICT services, such as server and desktop support; VOIP and internet connectivity; Remote Office; online backup...
- Directing role in 17 multi-tenant commercial office buildings in the Randstand area
- 3 corporate offices (Amsterdam, Den Haag, Rotterdam), 75 employees servicing 500+ clients

MuM in the Netherlands

“As ambassadors of MikroTik we want to grow awareness and market share in NL”

Traditional vendors versus MikroTik’

Our Case

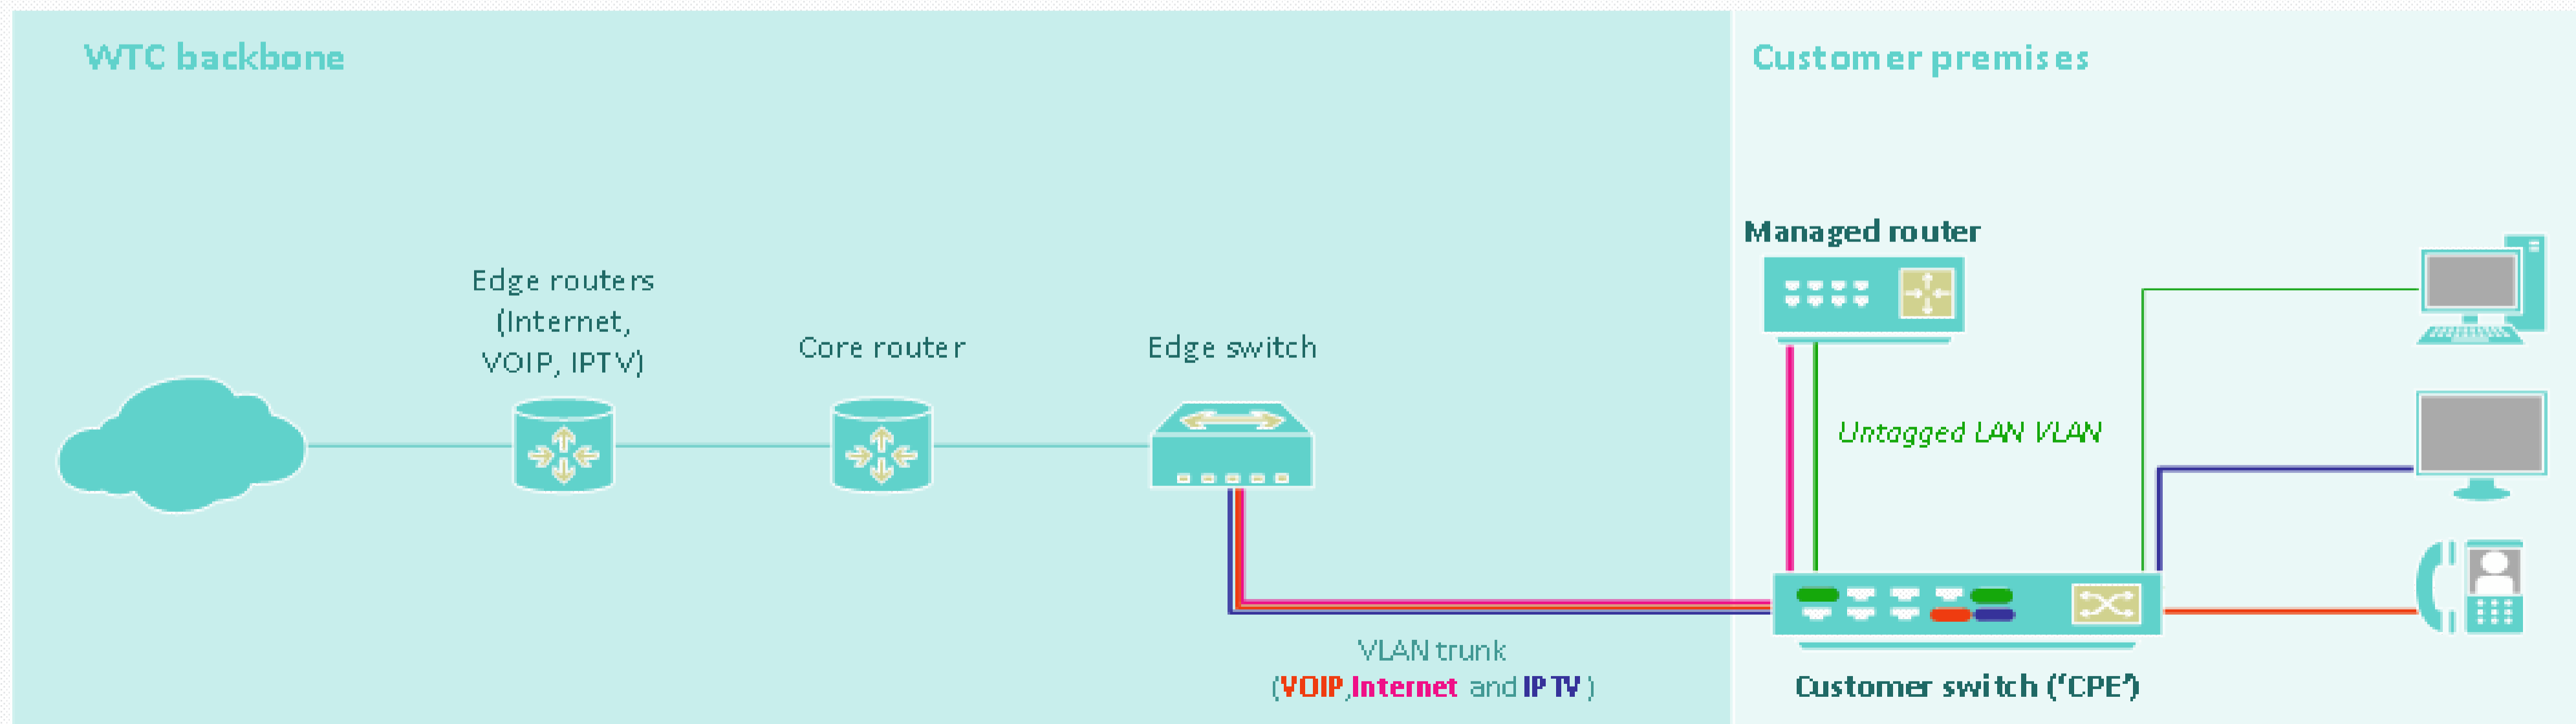

MikroTik plays nice in corporate environments

World Trade Center Amsterdam (NDI ICT Solutions)

- 500+ clients
- International clients
- 1 network with internet, telephony & IP-TV

Legacy Backbone

Design Goals

- Demarcation > provide a clear boundary between responsibilities client and provider
- Monitoring
 - bandwidth consumption on CPE
 - bandwidth consumption on individual client devices

behind CPE

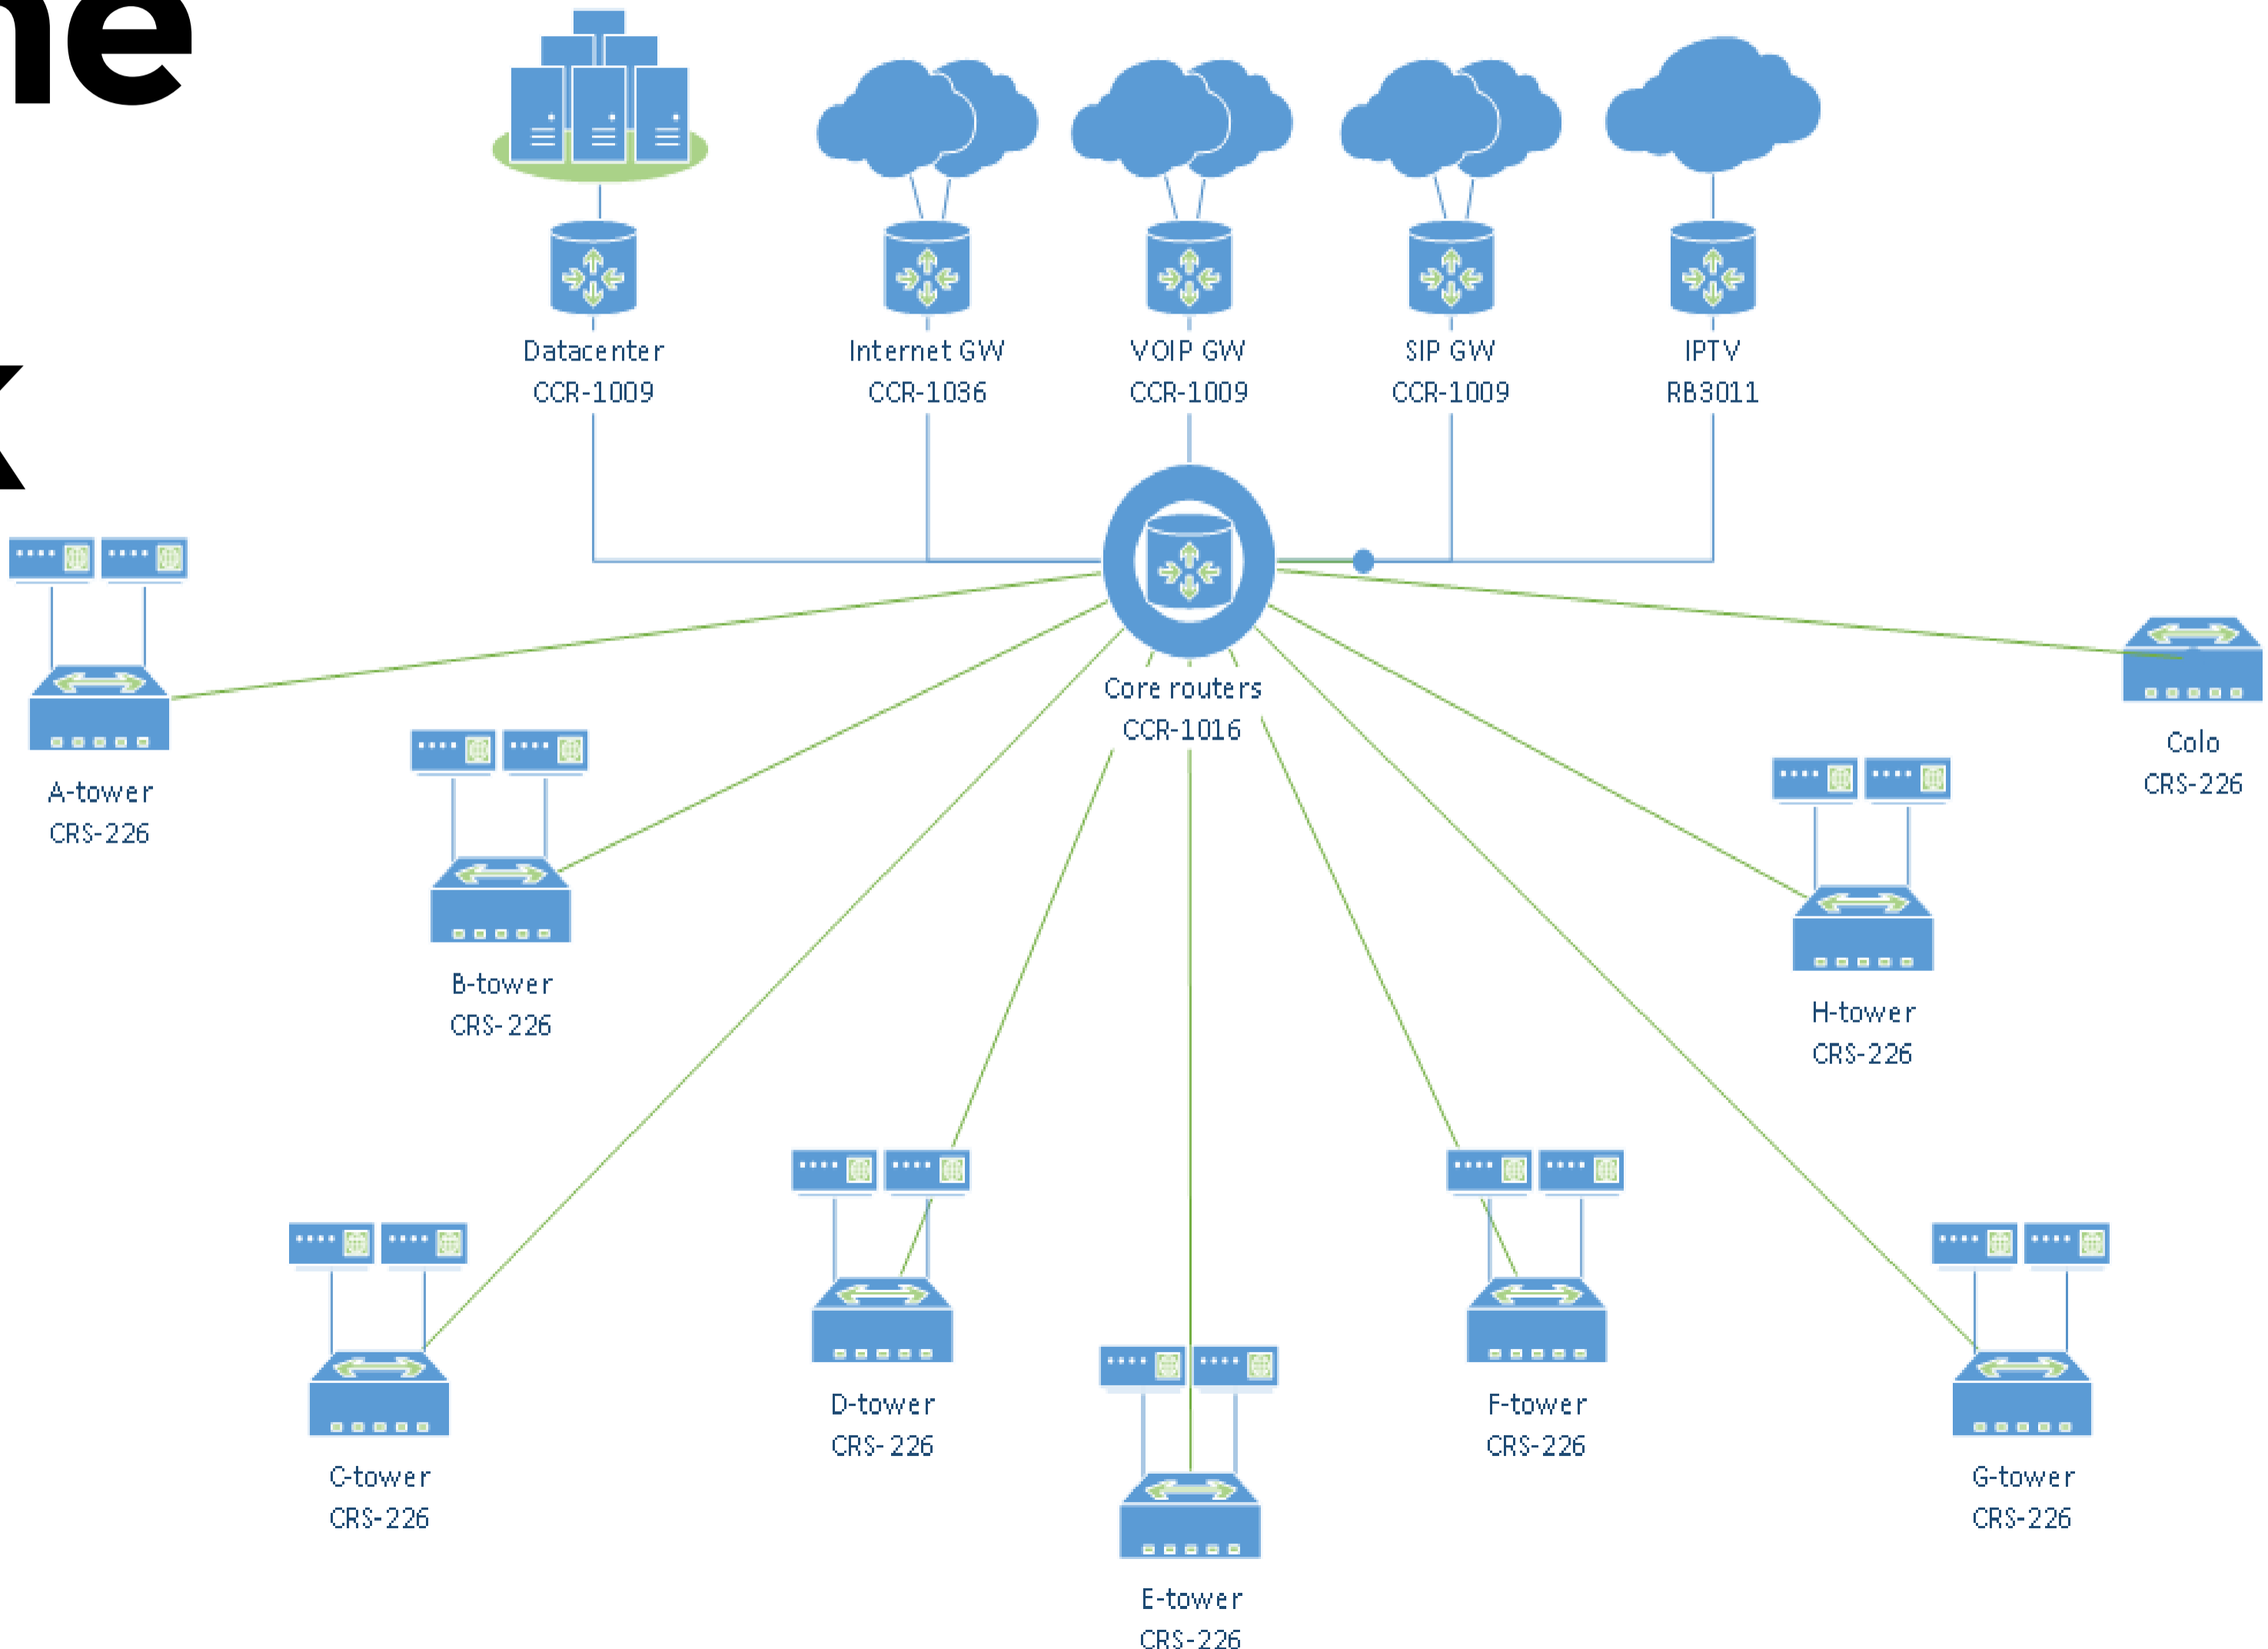

- Efficient allocation of IP addresses by using /32 addressing; flexibility in allocating non-sequential IP addresses
- Hassle-free and rapid deployment/provisioning of services, bandwidth, extra IP addresses
- Flexible traffic shaping to accommodate client-specific needs

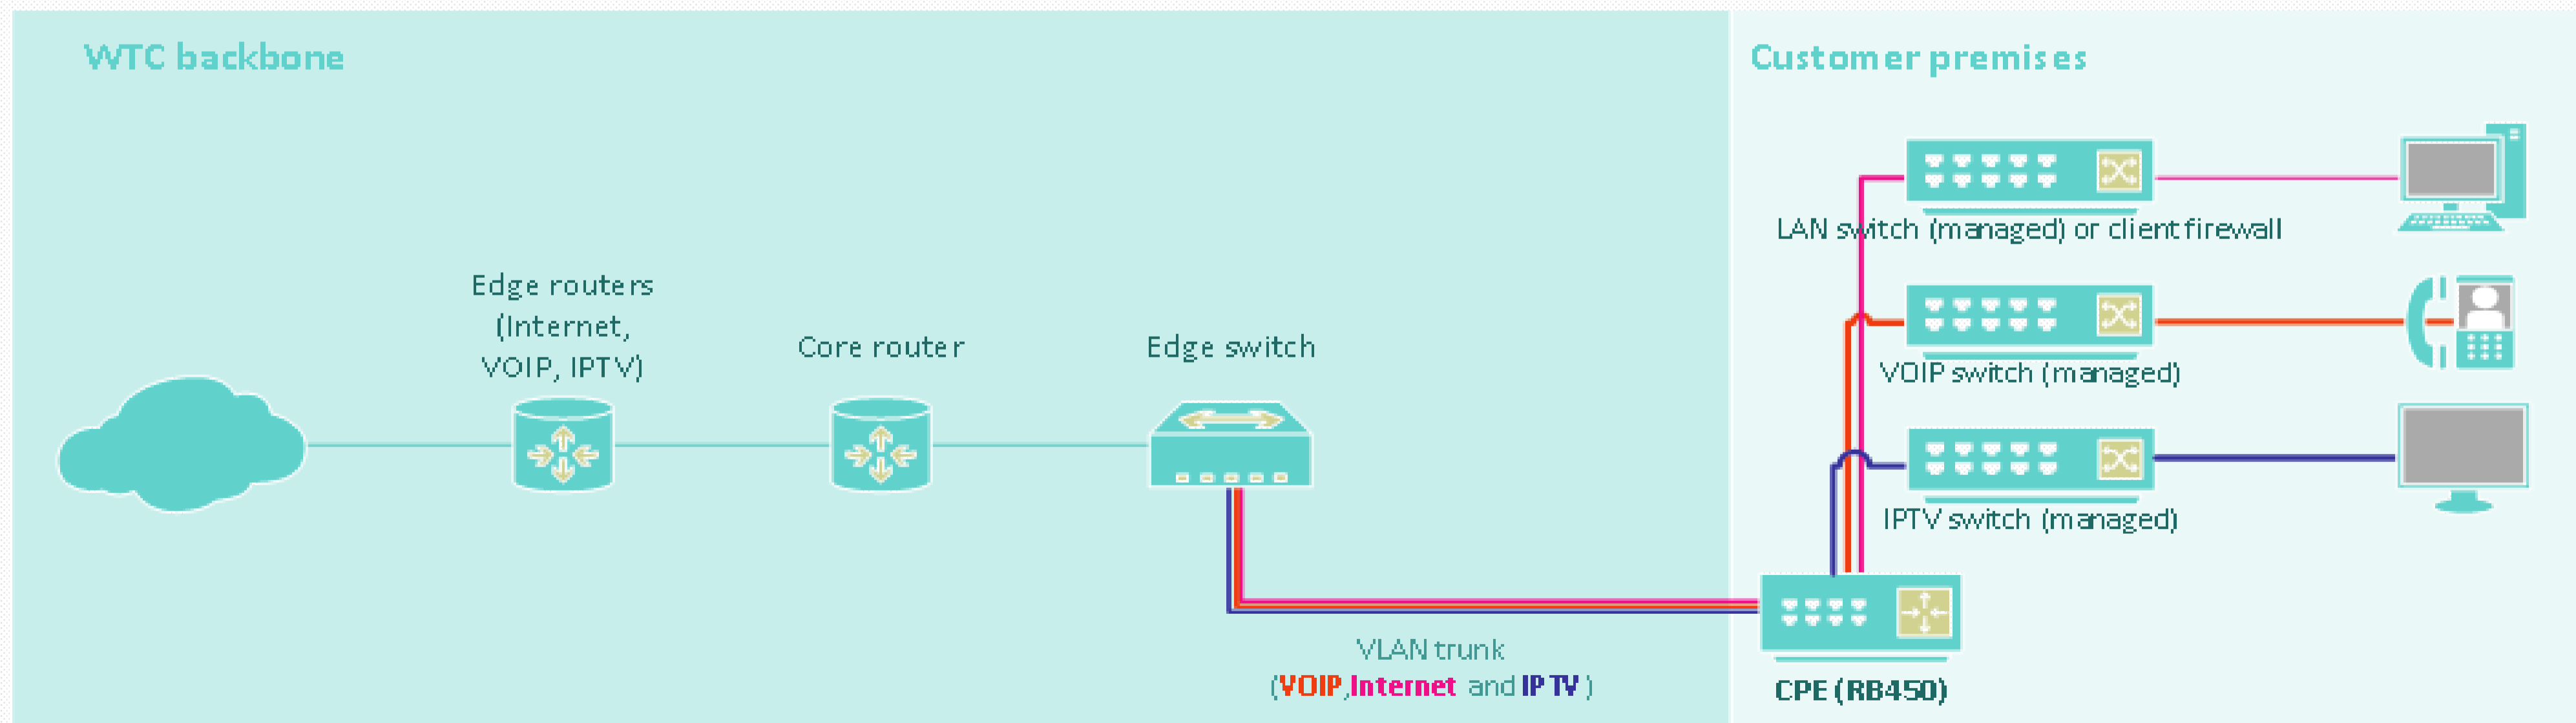

Feature criteria

- Rich VLAN and routing feature set > RouterOS
- Turn-key monitoring and troubleshooting: Torch, graphing, statistics and overall insight to what's going on in a device > WinBox
- Single vendor device range, from core to CPE > RB, CCR, CRS hardware
- bandwidth consumption on individual client devices behind CPE
- Manageability >RoMon & WinBox
- Thus: Mikrotik!

Backbone 2.0 core network

Backbone 2.0 client network

Migration Playbook

Two flavors

Managed & Bridge mode, always demarcation at MikroTik client device

- NAT/DHCP/ firewall/ VPN/ tailor-made traffic shaping etc.
- Bridge is BYOD

Backbone Deployment

- We decided to migrate managed clients first due to us having full control of the entire process
- Bridge clients easier in config however more difficult to migrate (external engineers, time difference)

Migration Playbook

The screenshot displays a network management interface with two main windows. The top window, titled 'Interface List', shows a table of network interfaces with columns for Name, Type, L2 MTU, Tx, Rx, Tx Pa..., Rx P..., and Comment. The bottom window, titled 'Log', shows a table of system events with columns for timestamp, event type, and description.

Name	Type	L2 MTU	Tx	Rx	Tx Pa...	Rx P...	Comment
config_changelog	Bridge		0 bps	0 bps	0	0	
config_locatie	Bridge		0 bps	0 bps	0	0	H16
config_typeconfig	Bridge		0 bps	0 bps	0	0	Default-NAT
config_versie	Bridge		0 bps	0 bps	0	0	1.0
bridge-vl-PPPOE	Bridge	1516	87.4 kbps	9.8 kbps	14	6	
bridge3-vl-VOIP	Bridge		0 bps	0 bps	0	0	
bridge4-vl-IPTV	Bridge		0 bps	0 bps	0	0	
ether1ts-TRUNK	Ethernet	1520	91.9 kbps	10.7 kbps	17	6	
ether1-interface-vlan-IPTV	VLAN		0 bps	0 bps	0	0	
ether1-interface-vlan-MGMT	VLAN	1516	0 bps	0 bps	0	0	
ether1-interface-vlan-PPPOE30	VLAN	1516	87.4 kbps	9.8 kbps	14	6	
ether1-interface-vlan-VOIP	VLAN		0 bps	0 bps	0	0	
ether2-LAN	Ethernet	1520	7.8 kbps	5.1 kbps	2	7	
ether3-VOIP	Ethernet	1520	0 bps	0 bps	0	0	
ether4-IPTV	Ethernet	1520	0 bps	0 bps	0	0	
ether5-MGMT	Ethernet	1520	0 bps	0 bps	0	0	
pppoe-out1	PPPoE Client		84.9 kbps	9.4 kbps	14	6	

17 items (1 selected)

Timestamp	Event Type	Description
Nov/10/2016 23:17:33	Changelog	script, warning Disabled IPTV service per client's request
Nov/10/2016 23:19:19	Changelog	script, warning Extended DHCP pool from 192.168.88.100 to 192.168.88.200

Migration stats

**Migration from January
2015 until December 2016**

250 clients migrated

>300 RB450 CPE's installed

20 CRS226

10 CCR devices

Challenges

- IP migration (technical & project management) 2 yrs 3x /24 subnet
- Coordinating external IT departments
- Site Surveying
- Parallel environment for 2 years
- Building new core while migrating away
- Bridge and engineers mode without PTP compatibility (overlapping /30 in cpe while /32 in pppoe)
- CPE config evolving during project

Current improvements

- Darkfiber connectivity to DC
- From Torch-based (ad-hoc) to PRTG monitoring (proactive/historical)
- Mass updating CPE script
- RoMoN management over separate VLAN (layer 2)
- Separate management VLAN (Layer 3)

Wishlist

Software

- switch limitations/STP/IGMP snooping

Hardware

- PoE(+) switch
- 48 ports switch
- CCR with 16+ SFP cages
