MUM MikroTik User Meeting

Alta Disponibilidad con VRRP y Sincronización de configuración

Por: Maximiliano Dobladez
MKE Solutions

13 de Noviembre de 2017

Montevideo - Uruguay

MKE solutions

Presentación Personal

- Nombre: Maximiliano Dobladez
- ***CEO MKE Solutions***
- Consultor y Entrenador ***MikroTik RouterOS***
- Experiencia con *MikroTik RouterOS* desde 1999
- Entrenador desde 2006

- info@mkesolutions.net
- mdobladez
- @mdobladez

MUM

MKE Solutions

- Consultora en Telecomunicaciones
- Establecida en 2008
- Certificada en **ISO 9001:2015**
  - Soporte IT
  - Entrenamientos Oficiales

info@mkesolutions.net

MKE solutions

Soporte IT

- Diseño, desarrollo e implementación de soluciones.
- Incidencias puntuales.
- Soporte mensual (OutSourcing).
  - Revisión y Optimización
  - Actualización
  - Mantenimiento preventivo
  - Monitoreo
  - Asesoramiento
  - Soporte Prioritario
  - Guardia 24x7
  - Implementaciones Adicionales

MikroTik - *CCR1036-12G-4S* — ***v6.36.3 (stable)***

Device Name:	[redacted]
Category / Group:	[redacted]
IP Address:	1.1.2.128
Host Alive:	OK
Last Seen Alive:	33 seconds
Uptime:	00:29:36 (1776 secs)
Uptime (Reboot) Counter:	7 (Last Reset: September 20)

Cron Details

Last Probe:	47 seconds
Last Job Status:	Warning
Log Probe:	
Last Checked:	33 seconds
Last Time Modify Event:	25 minutes ago
Last Backup Export:	08 de Noviembre de 2017
Last Backup Binary:	08 de Noviembre de 2017

Hardware Details

System License	**DJN2-SXLD / Level 6**
Connection Tracking	Actual: **1482** / Max: **524288**

RouterBOARD

Architecture-name:	tile
Current-firmware:	3.33
Factory-firmware:	3.27
Firmware-type:	tilegx

System Resources

Memory Used (2.29%): 371.8 MiB/15.9 GiB

Disk Used (13.87%): 142.1 MiB/1 GiB

CPU Load (0%): 36 core / 1200Ghz

Agenda

Desarrollo de la presentación:

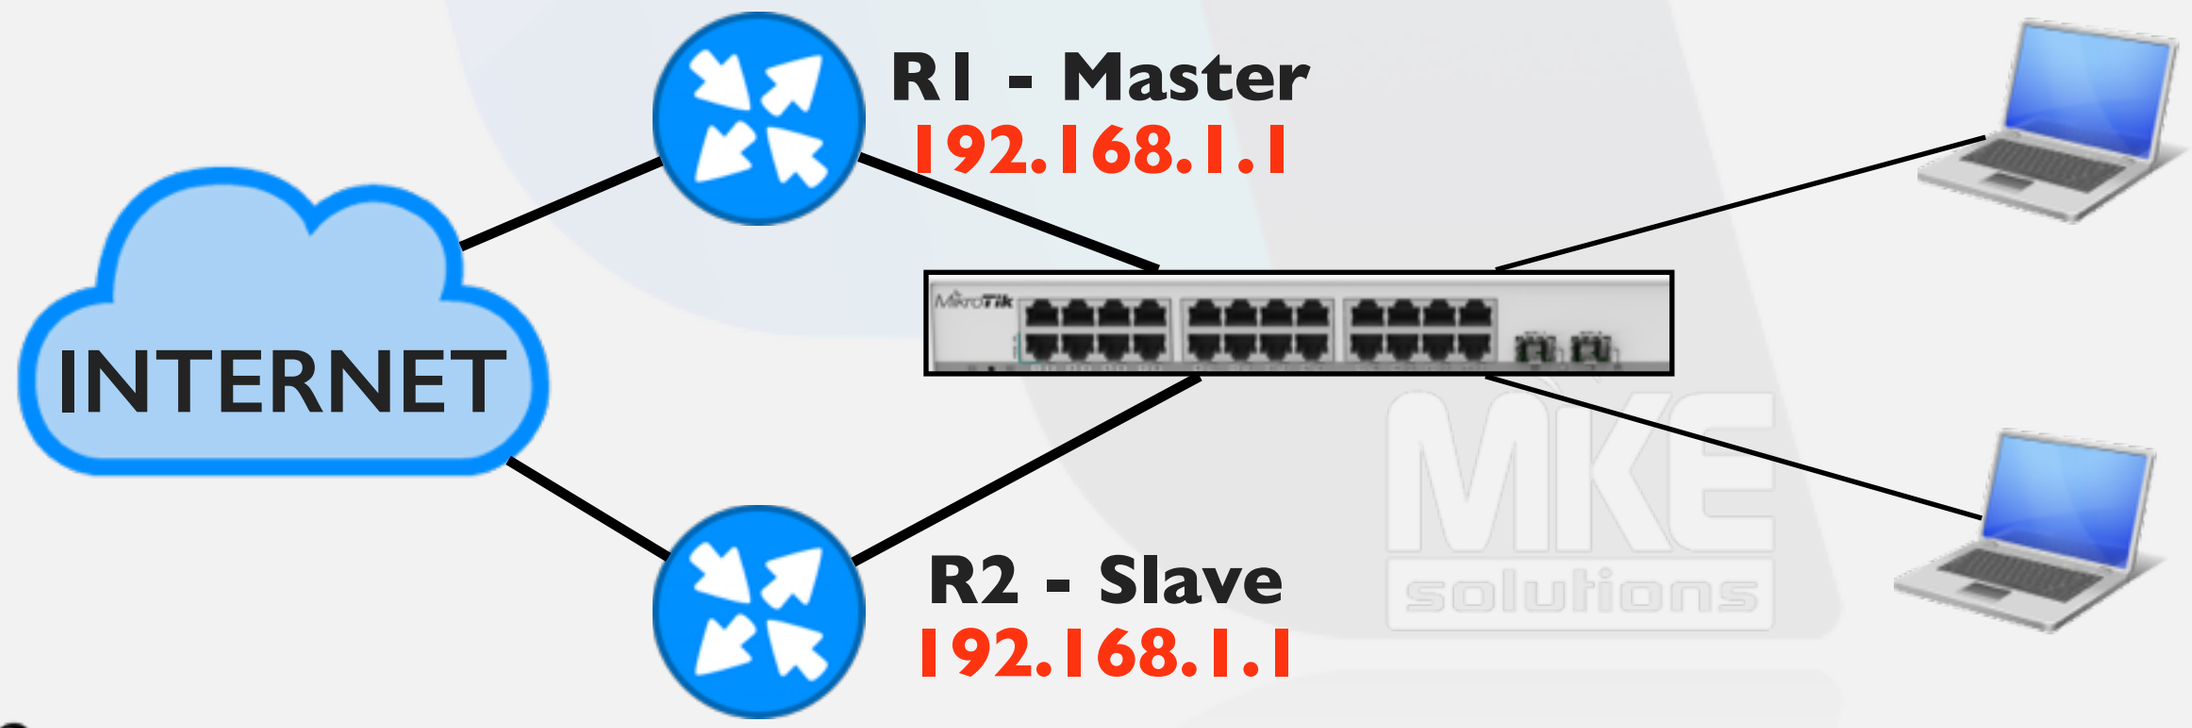
Conceptos Iniciales:

- **VRRP**: qué es?, cómo funciona? cómo se configura?
- **Sincronización**: como replicar la configuración del *Master* al *Backup*
- Recursos y bibliografía

VRRP

VRRP - Virtual Router Redundancy Protocol

- *VRRPv2:* RFC 3768 | *VRRPv3*: RFC 5798
- *ES* un protocolo de redundancia de routers.
- *NO ES* un protocolo de enrutamiento dinámico.
- *NO ES* un protocolo de balanceo de carga.



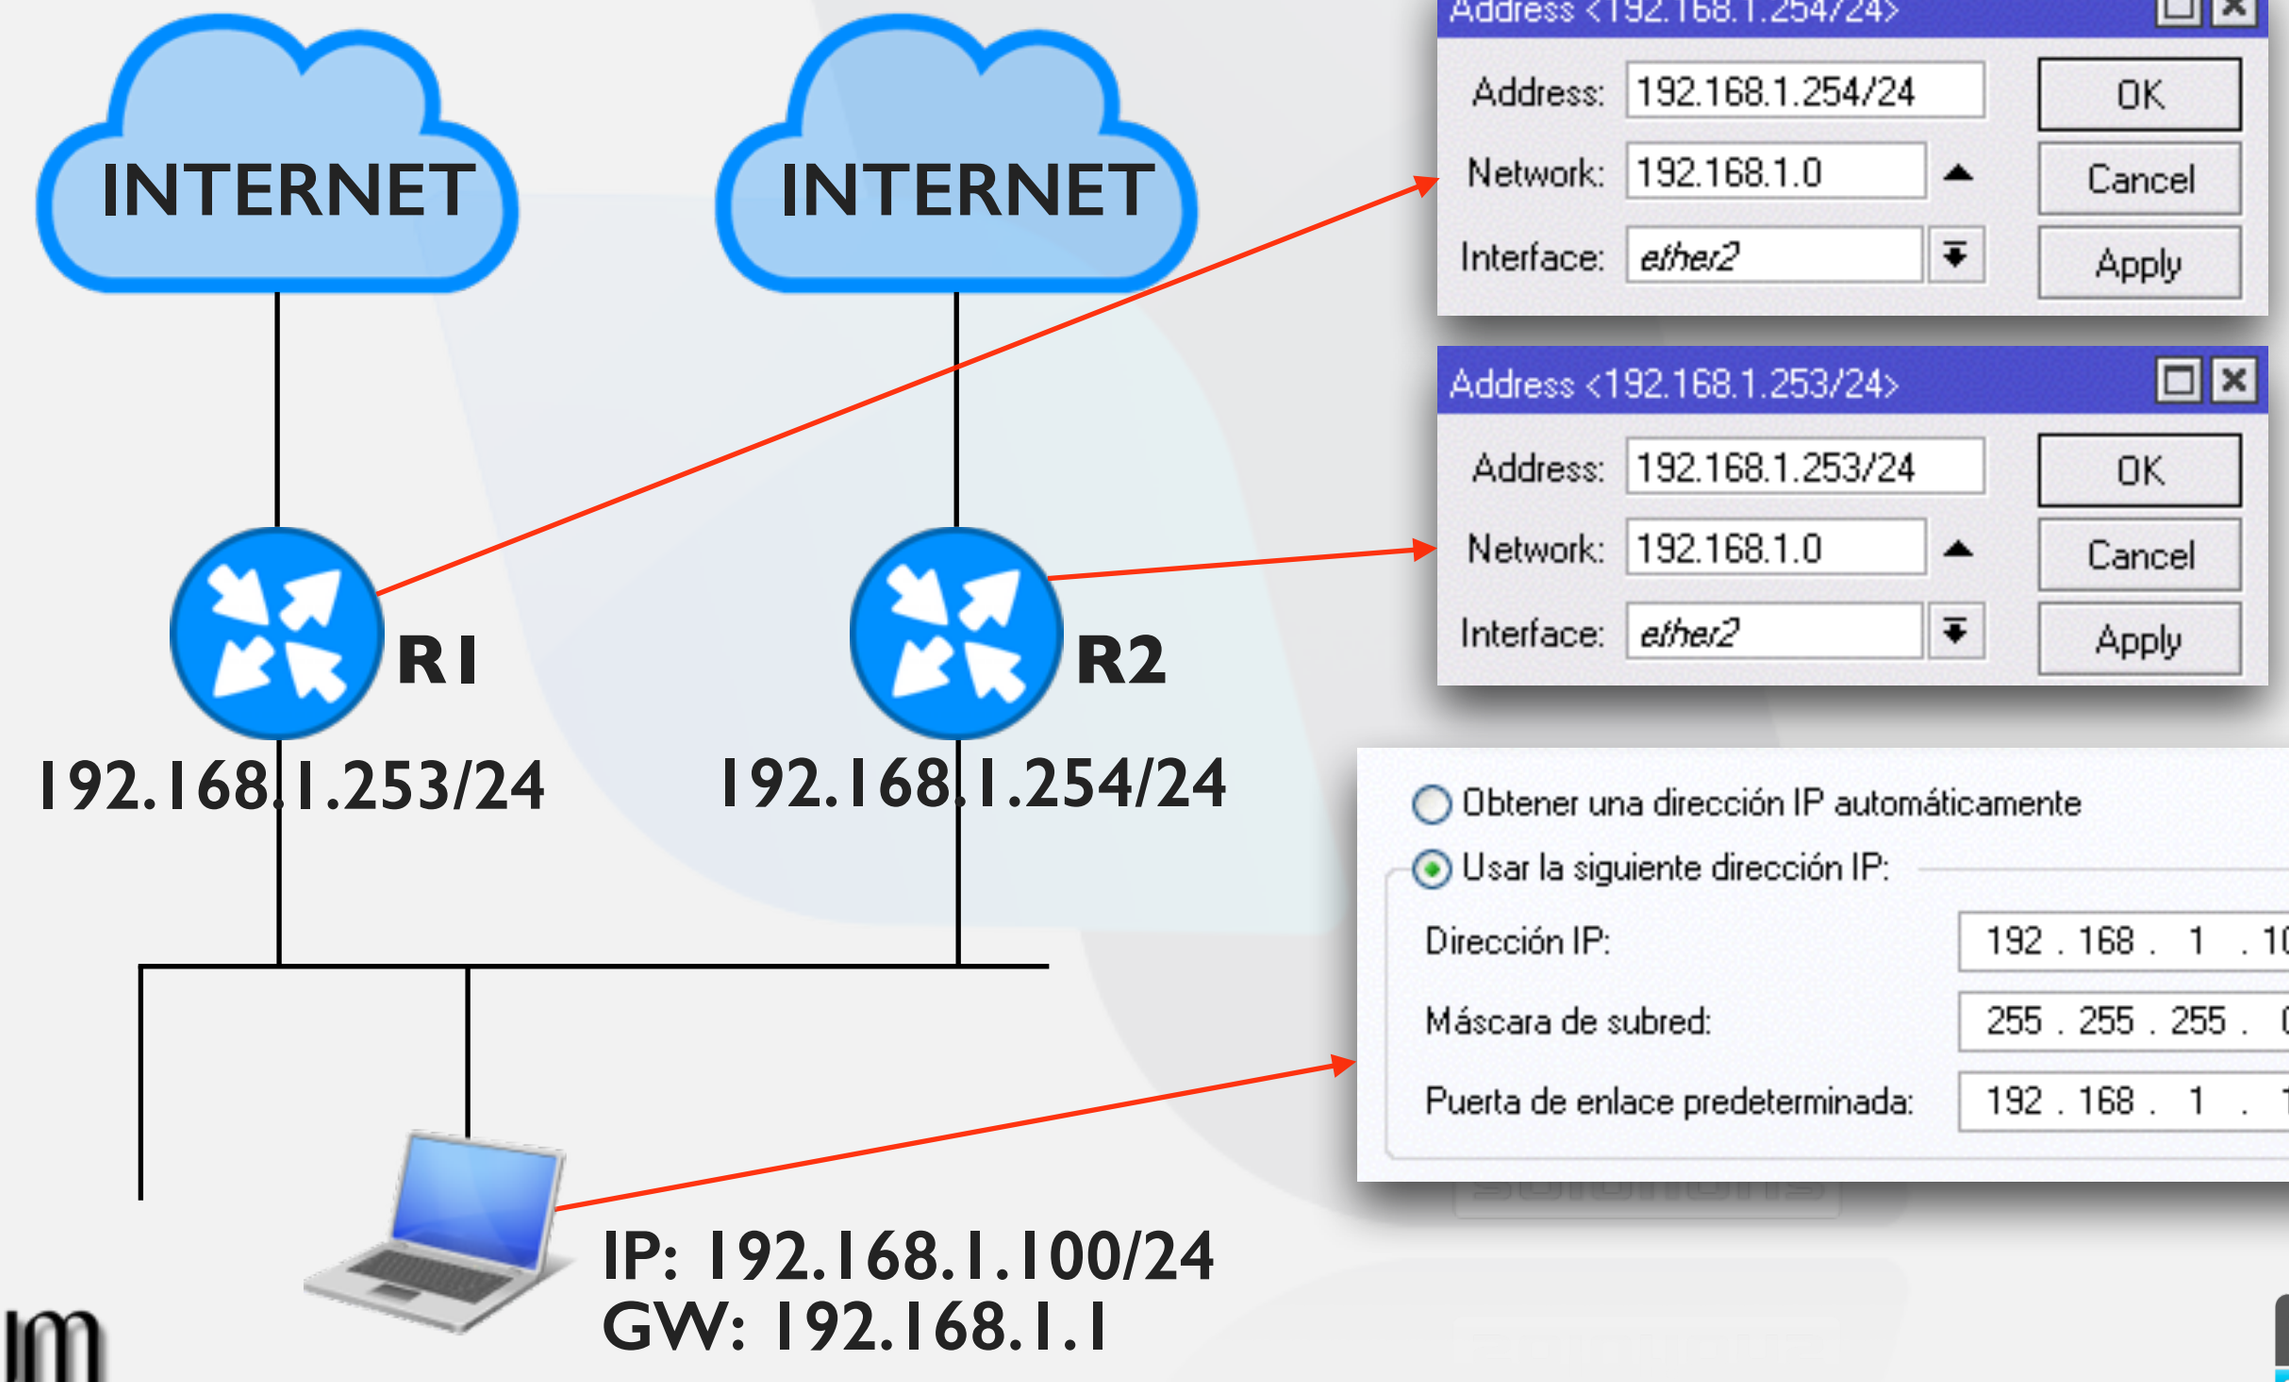
VRRP

Cómo trabaja ?

- ***Dos o más routers*** forman parte de un ***Cluster*** o ***Virtual Router*** (VR), compartiendo el mismo ***ID*** (***VRID***).
- En cada uno de ellos se levanta una ***interfaz virtual (vrrp) sobre la interfaz a redundar.***
- La ***prioridad asignada a la interfaz vrrp determinará el rol*** de cada router (master o backup).
- Todas las ***interfaces vrrp dentro del mismo VRID comparten la misma MAC-ADDRESS virtual.***
- Todos compartirán la misma dirección ***IP Virtual.***

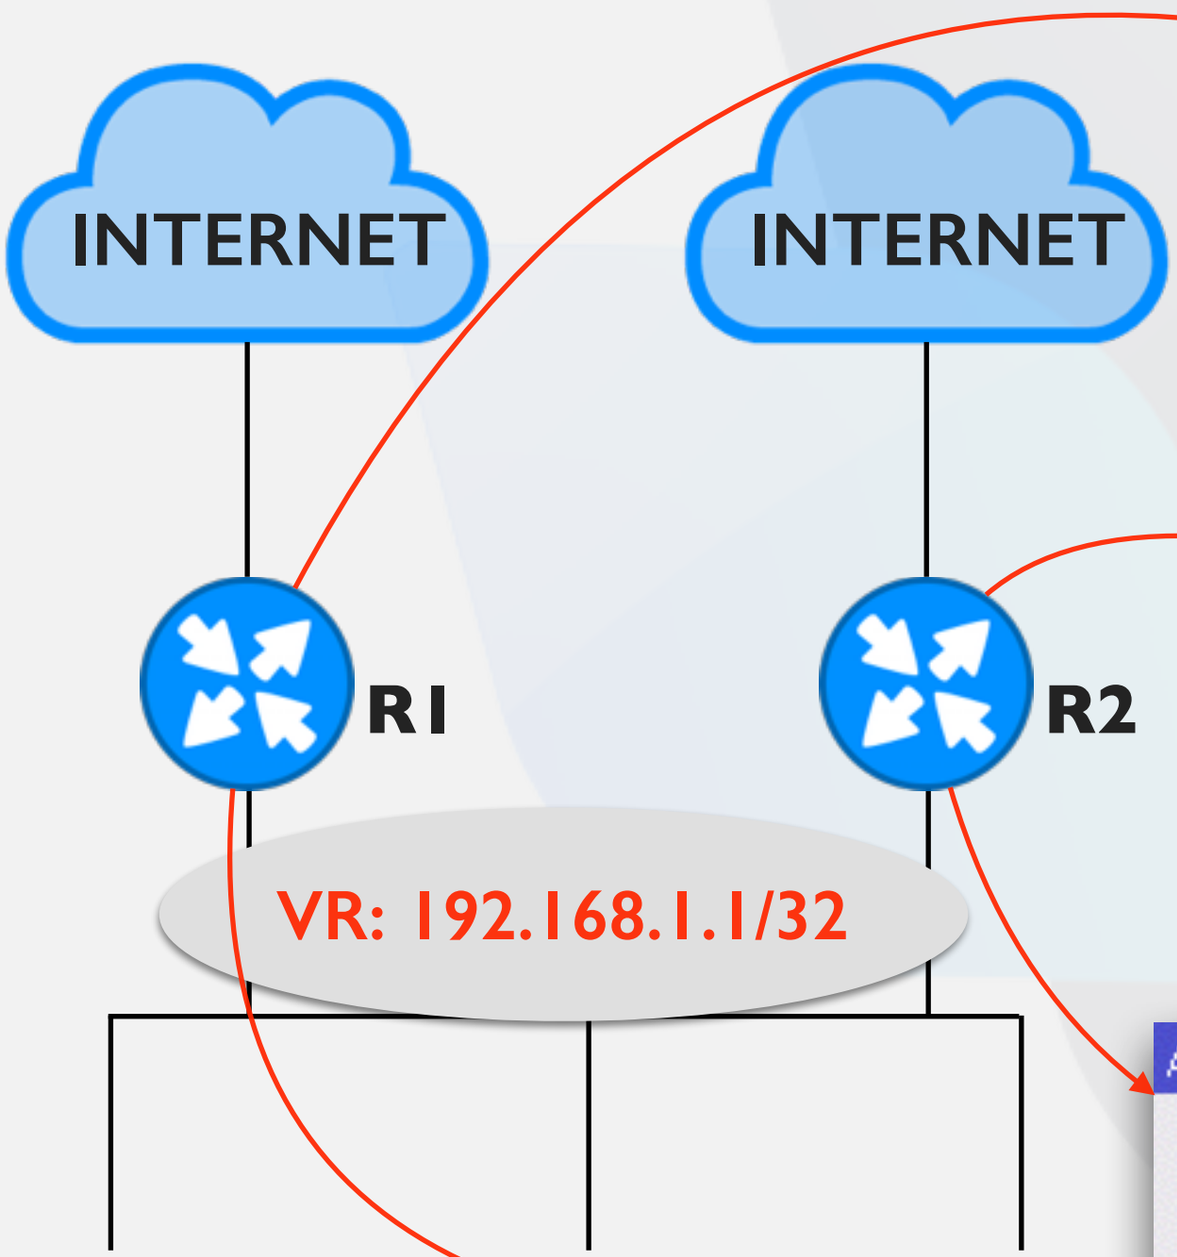
VRRP

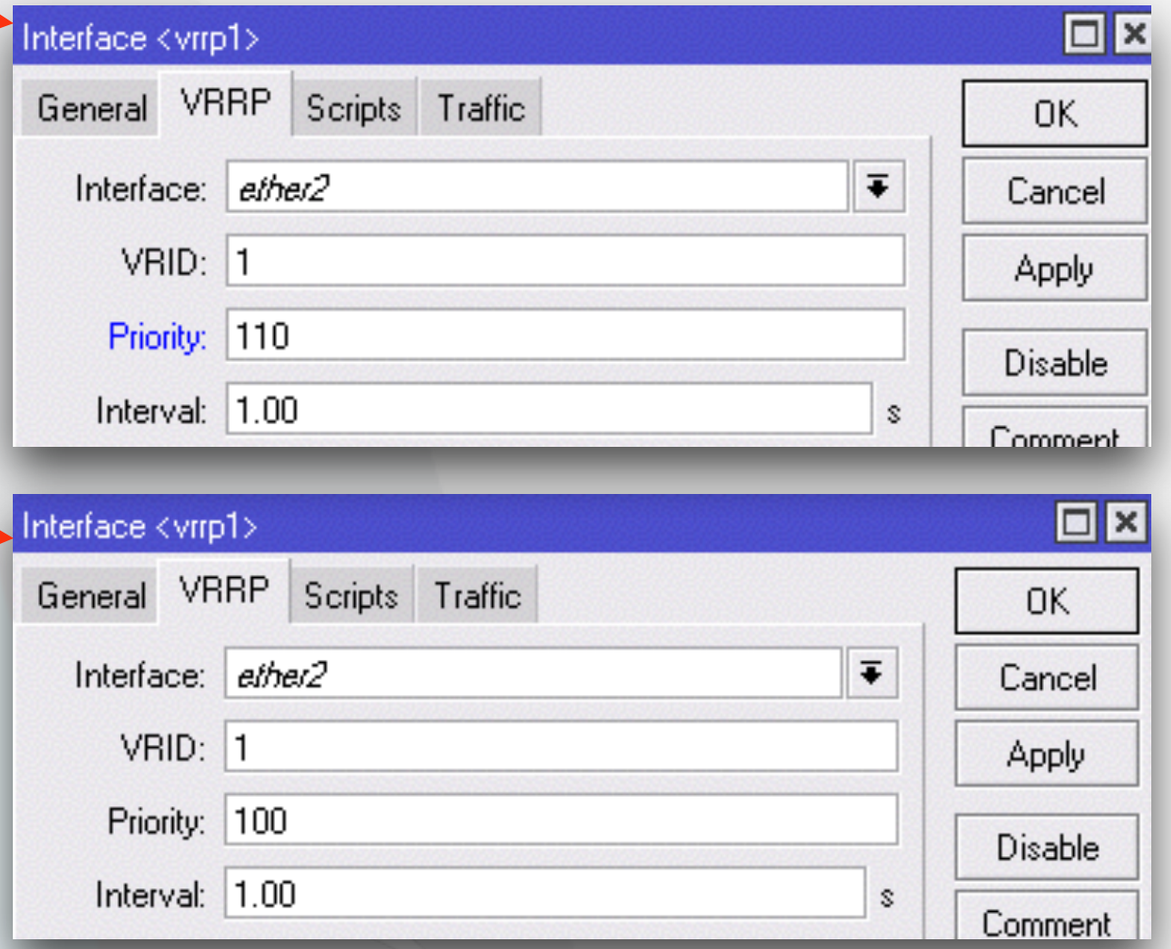
Configuración básica - parte 1

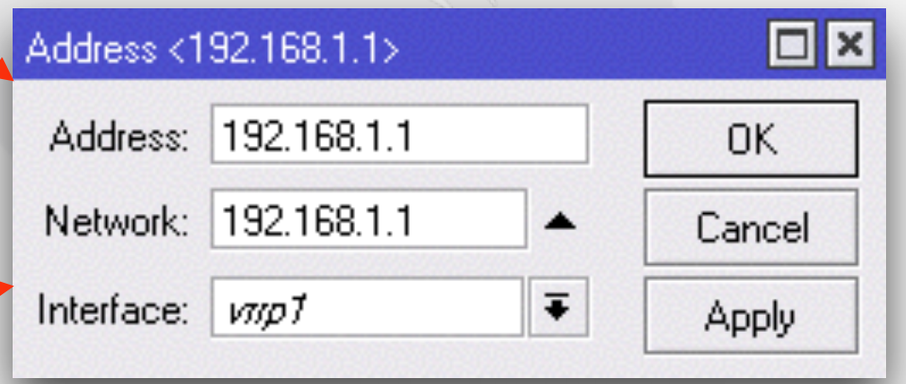


VRRP

Configuración básica - parte 2







VRRP

VRRP Master

Interface List

	Name	Type
R	ether1	Ethernet
R	ether2	Ethernet
RM	vrrp1	VRRP

Address List

	Address	Network	Interface
D	192.168.10.31/24	192.168.10.0	ether1
	192.168.168.1	192.168.168.1	vrrp1
	192.168.168.11/24	192.168.168.0	ether2

VRRP Backup

Interface List

	Name	Type
R	ether1	Ethernet
R	ether2	Ethernet
B	vrrp1	VRRP

Address List

	Address	Network	Interface
D	192.168.10.32/24	192.168.10.0	ether1
	192.168.168.1	192.168.168.1	vrrp1
	192.168.168.10/24	192.168.168.0	ether2

VRRP

A Saber, consideraciones:

- ***Todo el control se hace*** a través de paquetes ***multicast***, tanto en IPv4 como en IPv6.
- El ***router con mayor prioridad es*** asignado como ***master***, el resto serán ***backup*** hasta que éste falle.
- Todos los ***routers pertenecientes al mismo VR*** deben tener ***el mismo intervalo de publicación***.
- La ***dirección IP virtual debe tener máscara /32.***
- Tanto la ***IP virtual como la real, deben pertenecer al mismo segmento de red***.

Sincronización de configuraciones

Sincronización

Sincronización de Configuración

- Nos apoyaremos de un script (***cron***), que ejecutaremos cada cierto intervalo para replicar la configuración deseada en el router backup
- Este cron copiará 3 script del ***master*** al ***backup***:
  - ***clean.queue***: Limpia las reglas a importar
  - ***queue.rsc:*** Contiene las queues a importar
  - ***final.queue***: Script de finalización (opcional)

- Veamos escenario de sincronizar las ***simple queues***

https://github.com/elmaxid/vrrp_with_sync_mikrotik

Sincronización

Script: *clean.queue*

```
:log warning "----------------INICIANDO IMPORTACION ----------------------";
:log info "Limpiando queues";
/queue simple remove [find];
:delay 3s;
:log info "Listo!";
:log warning "Esperando archivo de importacion final >>>>>";
```

Script: *final.queue*

```
:log info "Listo!";
:log warning "----------------IMPORTACION FINALIZADA ----------------------";
```

Sincronización

Script en Master: *cron*

```
:log info "INICIO DE BACKUP";
:log info "Guardando queues";

/queue simple export file="queue";
:delay 5s;
:log info "Listo.!";
:log info "Limpiando reglas Router Slave";

/tool fetch address=192.168.168.10 user=ftp password=ftp123 \
   src-path=clean.queue mode=ftp upload=yes dst-path=clean.auto.rsc ;
:delay 5s;
:log info "Listo.!";
:log info "Actualizando Router Slave";
/tool fetch address=192.168.168.10 user=ftp password=ftp123 \
   src-path=queue.rsc mode=ftp upload=yes dst-path=queue.auto.rsc ;
:delay 5s;
/tool fetch address=192.168.168.10 user=ftp password=ftp123 \
    src-path=final.queue mode=ftp upload=yes dst-path=final.auto.rsc ;
:log info "Actualizado!";
```
